**Marriages :—OCT., NOV., DEC., 1915.**

**Births and Deaths.—JAN., FEB., MAR., 1916**

During the quarter ended 31st March last, there were registered in the 831 Registrars' Districts in Ireland 23,618 births—a number equal to an annual birth-rate of 21·6 in every 1,000 of the estimated population.\* There were 20,646 deaths, during the quarter, representing an annual rate of 18·9 per 1,000.

In the same period (according to the returns obtained at the several Irish sea-ports), 1,173 persons emigrated, 134 of these going to the United States, and 1,035 to Great Britain and the Colonies.

In England and Wales during the quarter ended 31st March, the birth-rate represented was 21·6 per 1,000, on assumed population (1915), and the death-rate 15·8 per 1,000.

The birth-rate in Ireland for the quarter is 2·0 below the average rate for the corresponding quarter of the ten years, 1906–1915, and 1·9 below the rate for the first quarter of 1915. The deaths are 3,524 below those registered in the corresponding quarter of 1915 ; the death-rate is 3·2 below the rate for that quarter, and 1·1 below the average for the first quarter of the ten years, 1906–1915.

In comparison with those for the corresponding quarter of 1915, the returns of pauperism furnished by the Local Government Board show a decrease of 2,530 in the average number of Workhouse inmates on Saturdays during the quarter, and a decrease of 2,969 in the average number of persons on out-door relief (Table VII.).

\* See note (\*) on page 2 and Table on page 14.

The annual rate (5·3 per 1,000 of the population) represented by the marriages registered during the fourth quarter of 1915, is 0·4 above the average rate for the corresponding quarter of the preceding ten years.

TABLE I.—Showing for each PROVINCE and COUNTY in Ireland, the Annual Rate per 1,000 of the population,\* represented by the number of MARRIAGES registered during the Quarter ended 31st December, 1915, and by the BIRTHS and DEATHS registered in the Quarter ended 31st March, 1916.

\* Throughout this Report the rates for the total of Ireland are calculated on the estimated population in the middle of 1914 ; those for the county boroughs of Dublin and Belfast and Londonderry Co. and Co. Borough on the population estimated to the middle of the year 1915 ; and those for the provinces and remaining counties on the population according to the Census of 1911.

## MARRIAGES.

The Marriages (5,787) registered in Ireland during the fourth quarter of 1915 are equivalent to an annual rate of 5·3 per 1,000 of the estimated population, being 0·2 above the rate for the corresponding quarter of 1914, and 0·4 above the average rate for the fourth quarter of the ten years 1905-1914. Of the total number of marriages, 3,990 were registered under the provisions of the 26 and 27 Vic., cap. 90, and 1,797 under the 7 and 8 Vic., cap. 91 ; the former number being equal to an annual rate of 4·9 per 1,000 of the estimated Roman Catholic population, and the latter affording a rate of 6·3 per 1,000 of the members of all other religious persuasions. The rate under the former heading is 0·5 above, and that under the latter heading 0·1 above the average rate for the corresponding quarter of the previous ten years.

Of 24,347 marriages during the year 1915, there were registered in the first quarter, 6,275 ; in the second, 6,179 ; in the third, 6,106 ; and in the fourth, 5,787.

TABLE II.—Showing by QUARTERLY PERIODS the MARRIAGES registered in Ireland in each of the eleven years, 1905–1915, and the average number for the ten years, 1905–1914.

## BIRTHS.

The number of births registered during the quarter ended 31st March last was 23,618—12,108 boys and 11,510 girls—being equal to an annual rate of 21·6 per 1,000 of the estimated population. The average number of births registered during the corresponding quarter of the ten years, 1906–15, was 25,868, equivalent to an annual rate of 23·6 per 1,000 of the estimated mean population of those years.

The respective birth-rates for the four provinces\* during the quarter under review are—Leinster, 21·9 per 1,000 of the population according to the Census of 1911; Munster, 21·0; Ulster, 22·1; and Connaught, 20·4.

## DEATHS.

The number of deaths registered in Ireland during the quarter ended 31st March last was 20,646—10,317 males and 10,329 females—affording an annual rate of 18·9 per 1,000 of the estimated population; the average rate for the corresponding quarter of the ten years, 1905–15, was 20·0 per 1,000.

The death-rate in Leinster was 20·5 per 1,000 of the population according to the Census of 1911; in Munster, 17·7; in Ulster, 19·4; and in Connaught, 15·8

\* See note (\*) on page 2.

TABLE III.—Showing by QUARTERLY PERIODS the number of BIRTHS and DEATHS registered in Ireland in each of the ten years 1906–1915, and the average number for that period; also the number registered during the first quarter of the year 1916:—

AGES.—Of the 20,646 deaths registered last quarter, 2,212, or 10·7 per cent., were of infants under one year of age; and 9,092, or 44·0 per cent., were of persons aged 65 years and upwards. The deaths of infants under one year old are equal to 93·7 per 1,000 of the births registered. In the Province of Leinster the number of deaths of infants under one year old equalled 11·7 per cent. of the total deaths registered therein; in Munster, 9·9 per cent.; in Ulster, 11·3 per cent.; and in Connaught, 7·9 per cent. The deaths of persons 65 years old and upwards registered during the quarter in Leinster are equal to 41·0 per cent.; in Munster to 44·6 per cent.; in Ulster, to 42·9 per cent.; and in Connaught, to 54·1 per cent. of the total deaths registered in the province.

#### CAUSES OF DEATH.

As may be seen from the following Table the total number of deaths from the principal epidemic diseases\* is 896, and is equivalent to an annual rate of 0·82 per 1,000 of the estimated population in 1914, being 44 (or 0·04 per 1,000) under the average for the first quarter of the five years preceding.

TABLE IV.—Showing the number of deaths from the principal epidemic diseases returned by the Registrars as having been registered during the quarter ended 31st March, 1916, and in each of the eight quarters immediately preceding, with the averages for the first quarter of the five years, 1911–1915, and the corresponding annual rates per 1,000 of the population, represented by the deaths from these causes, during the periods above referred to.

\* See note (†) on page 7.

ENTERIC FEVER.—Deaths from this cause number 58, being 12 under the average for the first quarter of the five years, 1911–1915; in the second, third, and fourth quarters of the year 1915, deaths from enteric fever numbered 45, 33 and 73 respectively. Of the 58 deaths, 5 deaths each occurred in the unions of Dublin North, Dublin South, and Omagh, 4 in Cork, 3 in Lisburn, (one appertaining to Belfast), and 2 deaths each in the unions of Cookstown, Drogheda, Dundalk, Limerick, Longford, Loughrea, and Urlingford.

TYPHUS.—Seven deaths from typhus were recorded as against an average of 15 for the first quarter of the preceding five years, the respective numbers registered in the last three quarters of 1915 being 6, 8, and 6. Of the 7 deaths for the quarter, 4 were registered in the union of Longford, and 3 in Galway.

SMALL-POX.—No mortality from small-pox was reported.

MEASLES.—To measles 202 deaths, equivalent to an annual rate of 0·18 per 1,000 of the population, were ascribed. This number is 10 over the average for the first quarter of the five years, 1911–15, and higher than that recorded during any of the six preceding quarters, the number of deaths from measles registered during the second, third, and fourth quarters of 1915 being 170, 83 and 146 respectively. Of the 202 deaths, 166, or more than 82 per cent., occurred in six unions, viz.:—95 in Belfast, 37 in Dublin South, 6 in Dublin North, 10 in Newry, 9 in Cork, and 9 in Westport.

SCARLET FEVER.—Deaths from this disease which in the second quarter of 1915 numbered 77, rose to 89 in the third, and to 138 in the fourth, fell to 79 in the quarter just ended, as compared with an average of 90 for the first quarter of the five years, 1911–15. Of the 79 deaths, 16 occurred in Lisburn union, 15 of the latter belonging to Belfast city, 8 were registered in Belfast union, 4 in Cork, 4 in Dublin North, one in Dublin South, 4 in Killala, 3 in Londonderry and 3 in Strabane.

WHOOPING-COUGH.—The number of deaths from whooping-cough was 241, being equivalent to an annual rate of 0·22 per 1,000 of the population. The average number for the first quarter of the five years preceding was 245, and the deaths for the second, third, and fourth quarters of 1915 amounted to 179, 144 and 167, respectively. In the following unions 5 or more deaths were registered during the past quarter:—Belfast (57), Dublin North (24), Dublin South (7), Limerick (15), Lurgan (12), Downpatrick (11), Ballymena (9), Carrick-on-Suir (7), Lisburn (6), Inishowen (5), and Naas (5).

DIPHTHERIA.—Deaths from diphtheria which, in the second, third, and fourth quarters of 1915 were, respectively, 68, 53 and 103, numbered 89 in the quarter under review, the latter number being 8 under the average for the first quarter of the five years, 1911–15. In Lisburn union during the first quarter of 1916, 12 deaths were recorded, 9 of the latter belonging to Belfast city, 8 were registered in Belfast union, 8 in Dublin South, 5 in Dublin North, 6 in Swineford, 5 in Cork, 4 in Newtownards, and 3 in Rathdrum.

DIARRHOEAL DISEASES.—Under this heading 214 deaths were returned, of which 175 were deaths from diarrhoea and enteritis of children under 2 years of age, the average number of deaths of children from the latter causes for the first quarter of the five years, 1911–15, being 183.

TUBERCULOSIS.—The number of deaths from tuberculous disease during the quarter, as returned by the registrars, amounted to 2,456, equivalent to an annual rate of 2·24 per 1,000 of the population, the average number for the corresponding quarter of the past five years being 2,474. Deaths from tuberculous disease in the second, third and fourth quarters of 1915 were respectively, 2,718, 2,016, and 2,039.

CANCER.—This disease caused 944 deaths, affording an annual rate of 0·86 per 1,000 of the population. In the three preceding quarters the corresponding rates were 0·77, 0·79, and 0·83 respectively.

## INQUESTS.

There were 424 inquests reported to the Registrars during the quarter; this number being equal to one in every 48·7 of the total deaths registered.

In Leinster there was one inquest to every 50 deaths registered, in Munster one to 58, in Ulster one to 39, and in Connaught one to 78.

## DEATHS IN PUBLIC INSTITUTIONS.

Of the 20,646 deaths registered, 4,340 or 21·0 per cent., occurred in public institutions. In Leinster the percentage was 27·8, in Munster 26·1, in Ulster 15·1, and in Connaught 13·4.

## UNCERTIFIED DEATHS.

According to the returns, 5,148 of the 20,646 deaths which were registered during the quarter were uncertified, being 25 per cent. of the total. In Leinster the percentage was 18, in Munster 26, in Ulster 21, and in Connaught the uncertified deaths were 51 per cent. of the total deaths registered in the province.

## URBAN DISTRICTS.

Table V gives separate statistics for the Urban Districts. It will be observed that the birth-rate for last quarter in these districts which contain nearly one-third of the total population of the country was 24·7 per 1,000 of the population, (Census 1911), the rates for the second, third, and fourth quarters of 1915 being 26·9, 23·8, and 21·6, and the average rate for the first quarter of the 5 years, 1911–15, being 27·8. In the remainder of the country, the birth-rate for the quarter was 20·0 per 1,000, as against 21·7, 19·3, and 18·6 respectively, in the three preceding quarters, and an average rate for the corresponding quarter of the previous 5 years of 21·3.

The annual rate, represented by deaths from all causes for the Urban Districts, during the quarter just ended was 20·4 per 1,000 of the population, as compared with 18·6, 14·9, and 18·3, respectively, in the last three quarters of 1915, and an average of 22·5 for the first quarter of the 5 years, 1911–15. For the remainder of the country the death-rate during the past quarter was 18·0 per 1,000, the respective rates for the three preceding quarters being 17·8, 12·6, and 14·8, the average rate for the first quarter of the 5 years, 1911–15, being 18·4.

For the Principal Epidemic Diseases in the several Urban Districts, the average annual rate represented by the deaths from them, during the quarter under review, was 1·5 per 1,000 of the population; in the remainder of the country the rate was 0·5 per 1,000.

## URBAN DISTRICTS.

TABLE V.—BIRTHS and DEATHS registered during the FIRST QUARTER of the year 1916, in the DUBLIN REGISTRATION AREA, and in each of the PROVINCIAL URBAN DISTRICTS in IRELAND (exclusive of Deaths in Public Institutions of Persons admitted from other localities), with the number of deaths from each of the PRINCIPAL EPIDEMIC DISEASES †, from TUBERCULOUS DISEASE, and from CANCER, with the number of Uncertified Deaths.

NOTE.—“The Dublin Registration Area,” consists of the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown. The details for it and for each of the eighteen Urban Districts marked thus (\*) in the following Table have been compiled from the Weekly Returns furnished by the Registrars, and relate to the thirteen week ending Saturday, 1st April, 1916.

a Including one death from cerebro-spinal fever in Newry.

b Including one death from enteric fever, 15 from scarlet fever, 9 from diphtheria, one from diarrhoea, and 2 from cerebro-spinal fever admitted from the City of Belfast to the hospital for infectious diseases at Purdysburn, in the Registrar's District of Ballylesburn, and Union of Lisburn, and the deaths of 2 persons from cerebro-spinal meningitis registered in Belfast.

† See note (†) on page 7.

VACCINATION.

According to the Returns of Primary Vaccinations received for the first quarter of the year 1916, there were 12,886 persons successfully vaccinated.

EMIGRATION.

The Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, show that the number of emigrants who left Ireland during the quarter ended 31st March last was 1,173 (641 males and 532 females), being 84 more than in the corresponding quarter of the year 1915, and 2,340 below the average number for the first quarter of the ten years 1906–1915.

TABLE VI.—EMIGRATION from IRELAND during the months of January, February, and March, in 1915 and 1916 :—

MONTHS.	NUMBER OF EMIGRANTS.											
	Males.				Females.				Total.			
	1915.	1916.	In-crease.	De-crease.	1915.	1916.	In-crease.	De-crease.	1915.	1916.	In-crease.	De-crease.
January, . . .	272	230	.	42	94	128	34	.	366	358	.	8
February, . .	219	196	.	23	100	173	73	.	319	369	50	.
March, . . .	269	215	.	54	135	231	96	.	404	446	42	.
TOTAL, . .	760	641	.	119	329	532	203	.	1,089	1,173*	84	.

\* Including 134 emigrants to the United States of America, and 1,035 to Great Britain and the Colonies. Of the former 37 left in the month of January, 33 in February, and 64 in March. Of 133 steerage passengers to the United States, 21 had their passages paid for in America.

PRICES AND PAUPERISM.

The average price of Messrs. Boland's (Limited) 4-lb. loaf for last quarter, from the 3rd to the 29th January, was 8½*d.* per 4-lb. loaf, and for the rest of the quarter the average price was 9*d.*, which was also the average prices of Messrs. Johnston, Mooney, and O'Brien's (Limited), bread, delivered. In the first quarter of the year 1915 the average price for Messrs. Boland's was 6½*d.*, and for Messrs. Johnston, Mooney, and O'Brien's, 6¾*d.*, and in the corresponding quarter of 1906 the average price for both firms was 5½*d.*

The average price of oatmeal (1st quality) in Dublin for the quarter was 21*s.* 3*d.* per cwt. For the first quarter of the year 1915 the average price was 20*s.* and for the first quarter of 1906 the average price was 14*s.* 6*d.* per cwt.

The average price per cwt. of potatoes at the Dublin Potato Market for the quarter was 4*s.* 0¼*d.* In the first quarter of 1915 the average price was 4*s.* 2¼*d.*, and the price for the corresponding quarter of 1906 was 2*s.* 7*d.*

The average price per cwt. of beef at the Dublin Cattle Market was 84*s.* 6*d.*, as against 78*s.* 3*d.* for the first quarter of 1915, the average price for the first quarter of 1906 begin 54*s.* 3*d.*

The price (including cartage) of Whitehaven coal in the City of Dublin ranged from 34*s.* to 35*s.* per ton nett.

The highest price of Consols for the quarter was £59<sup>1</sup>/<sub>16</sub>, and the lowest was £56<sup>1</sup>/<sub>16</sub>.

The minimum annual rate of discount charged on Irish bills at the Bank of Ireland during the quarter was 5 per cent.

NOTE.—The prices of Consols at the Dublin Stock Exchange have been kindly furnished by the Secretary.

TABLE VII.—Showing the AVERAGE PRICES in DUBLIN of BREAD, OATMEAL, POTATOES, and BEEF, during the quarter (13 weeks) ended 1st April, 1916, as compared with the average for the first quarter of the previous ten years, and the AVERAGE NUMBER of PERSONS in IRELAND receiving IN-DOOR AND OUTDOOR RELIEF.

PERIOD.	Average PRICES OF PROVISIONS.					PAUPERISM.			
						AVERAGE NUMBER OF PERSONS RELIEVED.			
	BREAD (4lb. Loaf)		OATMEAL (Corn Exchange), per Cwt. 1st quality.	POTATOES (at Potato Market) per Cwt.	BEEF (at the Dublin Cattle Market), per Cwt.	In-door.	Ordinary relief.	By means of works devised for the relief of distress.	Total Outdoor

(a) Messrs. Boland's, Limited.

(b) Messrs. Johnston, Mooney, and O'Brien's (Limited) 4-lb. loaf delivered; the price in Messrs. Johnston, Mooney and O'Brien's shops, exclusive of delivery, was ½d. per 4-lb. loaf lower.

NOTE.—The average prices of Oatmeal, Potatoes, and Beef given in the above Table have been kindly supplied by the Department of Agriculture and Technical Instruction for Ireland, and the number of persons receiving In-door and Out-door Relief by the Local Government Board.

## METEOROLOGY.

[Prepared in the Meteorological Office, under the direction of Sir Napier Shaw, F.R.S.]

JANUARY, 1916.—The general character of the weather was unsettled, stormy and very mild. The total amount of rain, however, which fell on 24 or 25 days over the country generally, was less than the normal.

Temperature.—The mean temperature for the month was 280°·5A (45°·5F) in the North, and 281°·5A (47°·3F) in the South, an excess of 2°·7A (4°·9F) in both districts. Over a considerable area in the east and south-east the excess was as much as 3°·6A (6°·5F). Maximum readings above 283°A (50°F) were recorded on many days, and almost every part of the country had several maxima some degrees above that figure. At Kingstown on the 2nd, and again on the 6th, the thermometer rose to 288°·5A (60°F). At Shankill on the 2nd, 6th, and 21st, and at Killarney on the 19th the reading was only a trifle lower. Over the greater part of the country the screened thermometer did not once fall below the freezing point. At several stations a reading of 273°A (32°F) was reported, but the only lower values were 272°A (30°F) at Ballinacurra on the 24th, and at Phoenix Park on the 28th, and 272°·5A (31°F) at Lisburn, and 270°·8A (28°F) at Markree Castle on the 30th.

Rainfall.—In the northern division the total fall was 78 mm., 10mm. less than the average; and in the south 65mm., or 37mm. less. At some stations in the north-west, west, and south-west there was rain almost every day, but at various places in the east and south-east the number of days with rain was less than 20. At Dublin City, rain fell on only 16 days, and at Trinity College on 13 days. No exceptionally heavy downpours were reported on any one day, the largest falls being 15mm. at Killarney on the 1st, and 16 mm. at Armagh on the 26th.

*Bright Sunshine.*—The mean ranged from 1·4 hour per day in the northern to 1·3 hour in the southern division. The former value was identical with the average, but the latter was as much as 0·4 hour per day below it. The brightest station was Kingstown, with a daily mean of 1·8 hour, and the least sunny Valencia, with 1·1 hour.

*The Wind* was almost continuously between South and West, the only exception to the rule being an occasional brief veering to the North-West. Gales were of frequent occurrence; some were of great violence on the west and north-west coasts, but the most generally severe was that of the 1st.

FEBRUARY.—The general character of the weather until after the 18th was rather mild, rainy, and very stormy, with the wind mainly between South and West or North-West. The subsequent conditions were cold, with winds from some Northerly or North-Easterly point, and showers of hail, sleet or snow.

*Temperature.*—For the month as a whole the temperature was  $277^{\circ}\text{A}$  ( $39^{\circ}\cdot2\text{F}$ ) in the north, and  $277^{\circ}\cdot8\text{A}$  ( $40^{\circ}\cdot6\text{F}$ ) in the south, the difference from the normal being  $0^{\circ}\cdot7\text{A}$  ( $1^{\circ}\cdot3\text{F}$ ). Compared with January the month was very cold. In the former month the mean temperature for the whole country was as high as  $281^{\circ}\text{A}$  ( $46^{\circ}\cdot4\text{F}$ ), but in February it was only  $277^{\circ}\cdot4\text{A}$  ( $39^{\circ}\cdot9\text{F}$ ). The first week was the warmest period generally, but in many localities the highest maximum temperature for the month occurred later—between the 15th and 18th—the thermometer reaching  $286^{\circ}\cdot4\text{A}$  ( $56^{\circ}\text{F}$ ) at some places in the south. Frost occurred rather frequently over the inland and northern districts, but it was only occasionally severe. A minimum temperature of  $269^{\circ}\text{A}$  ( $25^{\circ}\text{F}$ ) was recorded at Birr Castle on the 23rd and 24th, and on the 28th there was a reading of  $267^{\circ}\text{A}$  ( $21^{\circ}\text{F}$ ) at Markree Castle.

*Rain and Snow.*—A measurable amount of precipitation occurred on 22 days in the north and on 25 in the south. In the north the total fall was 95 mm., 24 mm. in excess of the average; and in the south, 128 mm., or 46 mm. more than the average. The wettest spot was Killarney, with 191 mm. of rain falling on 27 days, and the driest, Donaghadee, with 57 mm. falling on 11 days.

*Bright Sunshine* exceeded the average in most places, but was deficient at Birr Castle. At Armagh the excess amounted to 0·8 hours per day. In the northern division the daily mean duration amounted to 2·8 hours, an excess of 0·5 hour per day, and in the south to 2·7 hours, a daily excess of 0·2 hour. It is worthy of note that sunshine in Ireland for the month was more abundant than in Great Britain.

MARCH.—The month generally was dry and cold, with an abnormal predominance of winds from between East and North.

*Temperature.*—For the month as a whole the temperature was about  $2^{\circ}\text{A}$  ( $3^{\circ}\cdot6\text{F}$ ) below the average both in the northern and southern divisions, but the coldest period was the first 11 days, when the North was  $2^{\circ}\cdot6\text{A}$  ( $4^{\circ}\cdot7\text{F}$ ), and the South  $3^{\circ}\cdot6\text{A}$  ( $6^{\circ}\cdot4\text{F}$ ) below the normal, and no place recorded a maximum reading above  $282^{\circ}\text{A}$  ( $48^{\circ}\text{F}$ ). Subsequently the thermometer occasionally exceeded  $283^{\circ}\text{A}$  ( $50^{\circ}\text{F}$ ), and towards the end of the month reached a maximum of  $287^{\circ}\text{A}$  ( $57^{\circ}\text{F}$ ) in the North, and  $288^{\circ}\text{A}$  ( $59^{\circ}\text{F}$ ) in the South. Frost at night was of frequent occurrence during the first fortnight, and occurred from time to time during the latter half of the month. Minimum readings of about  $266^{\circ}\cdot4\text{A}$  ( $20^{\circ}\text{F}$ ) were not uncommon early in the month, and at Armagh on the 4th the thermometer recorded  $265^{\circ}\cdot2\text{A}$  ( $18^{\circ}\text{F}$ ). A reading as low as  $265^{\circ}\cdot8\text{A}$  ( $19^{\circ}\text{F}$ ) occurred at Clongowes Wood on the 24th, but generally the frost during the latter portion of the period was slight.

*Rainfall.*—In all parts of the country the total fall was less than the average. Over a large portion it was less than 50 mm. Until the 14th many localities were almost rainless, and very few of the subsequent falls were heavy. For the country generally the total fall was only 78 per cent. of the average. In the North the total measurement was 42 mm., or 27 mm. short of the average, and in the South 53 mm., or 23 mm. below the average. At no place was there as much as 25 mm. within 24 hours, the nearest approach being on the 19th, when 21 mm. fell at Phoenix Park, Dublin, and 23 mm. at Seskin, Carrick-on-Suir. The number of days with rain varied from 17 in the North to 21 in the South, but at several individual stations rain fell on less than 15 days.

*Bright Sunshine.*—The number of hours was less than the normal in all parts of the country. In the North the mean daily duration was 2·7 hours, a deficiency of 0·7 hour per day; and in the South the corresponding values were 3 hours and 0·9 hour. During the relatively settled weather of the first 12 days, and again towards the close of the month, the sunshine was about equal to the average, but for the week ending on the 18th the mean daily duration was less than one hour—only 0·5 hour at Armagh, Dublin, and Seskin.

FOR THE WHOLE QUARTER.

In consequence of the very mild January the mean temperature for the whole-quarter was just equal to the normal, and a little higher than that for the corresponding quarter of 1915.

*Rainfall.*—The total amount for the quarter was less than the average. In the north, where rain fell on 63 days, the total was 92 per cent. of the average, and in the south, where 71 days were more or less rainy, it was 96 per cent.

*Bright Sunshine.*—Both the northern and southern divisions had the same total duration, the daily mean being 2·3 hours, a figure 97 per cent. of the average in the north, but only 86 per cent. in the south.

TABLE VIII.—Showing the MEAN WEEKLY VALUES and the difference from their AVERAGE VALUES of the meteorological elements at the Phoenix Park, Dublin,\* for the thirteen weeks ended April 1st, 1916.

1867	5,486,509	2,681,015	2,805,494	1893	4,607,462	2,268,440	2,339,022				

NOTE.—This table has been constructed for the years 1842 to 1846.—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851.—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871.—The English birth and death-rates, as above, were used, deducting the number of emigrants, according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871, as explained for the last period.

1872–1915.—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and emigration, and adjusting the results for the years 1872–81, 1882–91, 1892–1901, and 1902–1911, to allow for the discrepancy between the number thus arrived at for 1881, 1891, 1901, and 1911 respectively, and the population as shown by the Census in each of these years. With reference to the population given for 1915, the movements of the military were taken into account. The population in 1915 has been adopted provisionally for 1916.

\* The Registrars' Districts (831 in number) are Sub-divisions of the Unions or Superintendent Registrars' Districts, and, with a few exceptions, are identical with the Dispensary Districts of the same names former under the Medical Charities Act. The letter  $W$  denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

† The details concerning Births and Deaths in the above table for Districts marked thus (†) on pages 27 and 28 are extracted from the Weekly Returns made by the Registrars, and relate to the 13 weeks extending from 3rd January, 1916, to 1st April, 1916. With the exception of 154 deaths of persons from localities outside the "Dublin Registration Area," the deaths in Public Institutions in these districts have been assigned to the respective districts comprised in the "Dublin Registration Area" from which the deceased were admitted.

Exclusive of 5 deaths in the Rathdown Union Workhouse of persons admitted from Kingstown, to which Urban District they have been assigned,

Marriages :—JAN., FEB., MAR., 1916

Births and Deaths.—APRIL, MAY, JUNE, 1916.

During the quarter ended 30th June last, there were registered in the 831 Registrars' Districts in Ireland 24,042 births—a number equal to an annual birth-rate of 22·2 in every 1,000 of the estimated population.\* There were 19,523 deaths, during the quarter, representing an annual rate of 18·0 per 1,000.

In the same period (according to the returns obtained by the Royal Irish Constabulary and the Metropolitan Police who acted as enumerators at the several Irish seaports), 1,900 persons emigrated, 1,208 of these going to the United States, and 692 to Great Britain and the Colonies.

In England and Wales last quarter the birth-rate represented was 23·1 in every 1000 of the estimated population, and the death-rate 14·0 per 1,000.

The birth-rate in Ireland for the quarter is 2·0 below the average rate for the corresponding quarter of the ten years, 1906–1915, and 1·2 below the rate for the second quarter of 1915. The deaths are 282 below those registered in the corresponding quarter of 1915 ; the death-rate is 0·1 below the rate for that quarter, but is 0·1 above the average for the second quarter of the ten years, 1906–1915.

In comparison with those for the corresponding quarter of 1915, the returns of pauperism furnished by the Local Government Board show a decrease of 1,015 in the average number of Workhouse inmates on Saturdays during the quarter, and a decrease of 3,274 in the average number of persons on out-door relief.

\* See note (\*) on page 64 and Table on page 76.

The annual rate (6·8 per 1,000 of the population) represented by the marriages registered during the first quarter of 1916, is 0·8 above the average rate for the corresponding quarter of the preceding ten years.

TABLE I.—Showing for each PROVINCE and COUNTY in Ireland, the Annual Rate per 1,000 of the population,\* represented by the number of MARRIAGES registered during the Quarter ended 31st March, 1916, and by the BIRTHS and DEATHS registered in the Quarter ended 30th June, 1916.

\* Throughout this Report the rates for the total of Ireland are calculated on the estimated population in the middle of 1915; those for the county boroughs of Dublin and Belfast and Londonderry Co. and Co. Borough on the population estimated to the middle of the year 1916; and those for the provinces and remaining counties on the population according to the Census of 1911.

## MARRIAGES.

The Marriages (7,348) registered in Ireland during the first quarter of 1916 are equivalent to an annual rate of 6·8 per 1,000 of the estimated population, being 1·1 above the rate for the corresponding quarter of 1915, and 0·8 above the average rate for the first quarter of the ten years 1906-1915. Of the total number of marriages, 6,102 were registered under the provisions of the 26 and 27 Vic., cap. 90, and 1,246 under the 7 and 8 Vic., cap. 81; the former number being equal to an annual rate of 7·6 per 1,000 of the estimated Roman Catholic population, and the latter affording a rate of 4·4 per 1,000 of the members of all other religious persuasions. The rate under the former heading is 1·2 above, but that under the latter heading 0·4 below the average rate for the corresponding quarter of the previous ten years.

It is to be borne in mind that in many parts of the country the greater portion of the annual number of Roman Catholic marriages is celebrated in the first quarter, while as regards other marriages the number in the first quarter is generally less than that for any of the other quarters of the year.

TABLE II.—Showing by QUARTERLY PERIODS the MARRIAGES registered in Ireland in each of the ten years, 1906–1915, and the average number for that period, also the number registered in the first quarter of 1916.

## BIRTHS.

The number of births registered during the quarter ended 30th June last was 24,042—12,629 boys and 11,413 girls—being equal to an annual ratio of 1 in every 45·1 or 22·2 per 1,000 of the estimated population. The average number of births registered during the corresponding quarter of the ten years, 1906–15, was 26,579 equivalent to an annual rate of 24·2 per 1,000 of the estimated mean population of those years.

The respective birth-rates for the four provinces\* last quarter are—Leinster, 21·6 per 1,000 of the population according to the Census of 1911; Munster, 22·0; Ulster, 22·4; and Connaught, 20·9.

## DEATHS.

The number of deaths registered in Ireland during the quarter ended 30th June last was 19,523—9,878 males and 9,645 females—affording an annual ratio of 1 in every 55·5 or 18·0 per 1,000 of the estimated population; the average rate for the corresponding quarter of the ten years, 1906–15, was 17·9 per 1,000.

The death-rate in Leinster was 19·9 per 1,000 of the population according to the Census of 1911; in Munster, 17·3; in Ulster, 18·0; and in Connaught, 14·1.

\* See note (\*) on page 64.

TABLE III.—Showing by QUARTERLY PERIODS the number of BIRTHS and DEATHS registered in Ireland in each of the ten years 1906–1915, and the average number for that period; also the number registered during the first and second quarters of the year 1916:—

AGES.—Of the 19,523 deaths registered last quarter, 1,894, or 9·7 per cent., were of infants under one year of age; and 8,209, or 42·0 per cent., were of persons aged 65 years and upwards. The deaths of infants under one year old are equal to 78·8 per 1,000 of the births registered. In the Province of Leinster the number of deaths of infants under one year old equalled 10·7 per cent. of the total deaths registered therein; in Munster, 8·4 per cent.; in Ulster, 10·3 per cent.; and in Connaught, 7·6 per cent. The deaths of persons 65 years old and upwards registered during the quarter in Leinster are equal to 36·2 per cent.; in Munster to 45·7 per cent.; in Ulster, to 41·0 per cent.; and in Connaught, to 53·7 per cent. of the total deaths registered in the province.

#### CAUSES OF DEATH.

As may be seen from the following Table the total number of deaths from the principal epidemic diseases\* is 782, and is equivalent to an annual rate of 0·72 per 1,000 living, being 79 (or 0·07 per 1,000) under the average for the second quarter of the five years preceding.

The following Table (Table IV.) shows the number of deaths from the principal epidemic diseases returned by the Registrars as having been registered during the quarter ended 30th June, 1916, and in each of the eight quarters immediately preceding; with the averages for the second quarter of the five years, 1911–1915, and the corresponding annual rates per 1,000 of the population, represented by the deaths from these causes, during the periods above referred to.

\* See note (†) on page 69.

**ENTERIC FEVER.**—Fifty-five deaths occurred during the quarter as compared with 33, 73, and 58, respectively, in the three previous quarters, and an average of 51 in the second quarter of the past five years. Five of the 55 deaths took place in the Athy Union or Superintendent Registrar's district, 5 in the North Dublin Union, 6 in South Dublin, 3 in Killarney, 4 in Liscowel, and 2 each in the following unions:—Ballinrobe, Banbridge, Belfast, Lisburn (of persons belonging to Belfast Co. Borough), Loughrea, and Manorhamilton.

**TYPHUS.**—There was an increase in the number of deaths from typhus, totalling 12 for all Ireland, as compared with 8, 6, and 7 respectively, in the three preceding quarters. The average for the corresponding quarter of the last 5 years was 11. No death from this disease took place in Connaught during the quarter, and the only union in which more than one death took place was Carrickmacross, where 2 deaths were registered.

**SMALL-POX.**—No case of this disease in Ireland was reported during the quarter.

**MEASLES.**—The deaths from measles which averaged 240 in the second quarter of the five years, 1911–15, numbered 135, equivalent to an annual rate of 0·12 per 1,000 of the population. More than half the deaths took place in the union district of Belfast, *i.e.*, 74. The only other unions in which more than 2 deaths occurred were:—Dublin South (21), Dublin North (7), Carlow (8) and Westport (4). In the three preceding quarters 83, 146, and 202 deaths, respectively were registered.

**SCARLET FEVER.**—The deaths from scarlet fever, which numbered 89, 138, and 79, respectively, in the 3 preceding quarters, were 80 in the period under notice, affording an annual rate of 0·07 per 1,000 of the population. Almost half, *i.e.*, 39, occurred in Ulster, the unions in that province in which deaths occurred being Lisburn, 16, of which 12 were admitted from Belfast Co. Borough, Larne, 4, Bawnboy (the portion in Co. Cavan) and Dunfanaghy, 3 each, and Castlederg, 2. In the other 3 provinces, 7 deaths from scarlet fever were registered in Cork union, 5 in Ballina, 4 in each of Birr and Dublin North, 3 in each of Dublin South and Sligo, and 2 in each of Callan, Kinsale, Limerick, New Ross and Skibbereen.

**WHOOPING-COUGH.**—Whooping-cough was the cause of death in 273 cases, equal to an annual rate of 0·25. In the 3 preceding quarters such deaths numbered 144, 167, and 241, respectively, while the average for the second quarter of the last 5 years was 203.

Of the 273 deaths, 170 occurred in Ulster, of which 46 were in Belfast union, 13 in Newry, 11 in Strabane, 10 in Omagh, 8 in Cavan, 7 in Dunfanaghy, 6 in Donegal, 5 in each of Cookstown, Downpatrick, and Lisburn, and 4 in each of Dungannon and Lurgan. In the other provinces the unions recording the greatest number of deaths from this malady were Limerick, 13, Waterford, 12, Dublin North and Dublin South, 11 each, Rathdown, 8, and Cork, 7.

**DIPHTHERIA.**—The number of deaths from diphtheria, 57, is equal to an annual rate of 0·05 per 1,000 of the population and compares favourably with the numbers registered in the 3 preceding quarters, 53, 103, and 89, respectively. The average for the second quarter of the 5 years 1911–15 was 74. The only unions in which 2 or more deaths occurred were Dublin North, 6, Lisburn, 4, Waterford, 3, and Ballymoney, Balrothery, Callan, Coleraine, Cork, Dublin South, and Glennamaddy, 2 each.

**DIARRHOEAL DISEASES.**—The deaths under this heading numbered 165 as against an average of 201 for the corresponding quarter of the past 5 years. They include 130 of children under 2 years, equal to an annual rate of 0·12 per 1,000 of the population.

**TUBERCULOSIS.**—An increase is shown in the number of deaths registered from all forms of this disease, 2,767 being registered as compared with 2,016, 2,039, and

2,456, respectively, in the 3 previous quarters, and an average of 2,651 for the second quarter of the 5 years 1911-15. The corresponding annual rates are 1·84 for September Quarter, 1915; 1·86 for December Quarter, 1915; 2·24 for March Quarter, 1916; and 2·55 for June Quarter 1916.

CANCER.—The 837 deaths returned by the Registrars as having been caused by cancer are almost equal to the average (836) for the June Quarter of the past 5 years, but a substantial reduction is shown when compared with the 3 quarters ended 31st March last, when the numbers registered were 860, 907, and 944, respectively.

#### INQUESTS.

There were 340 inquests reported to the Registrars during the quarter; this number being equal to one in every 57·4 of the total deaths registered.

In Leinster there was one inquest to every 50 deaths registered, in Munster one to 90, in Ulster one to 49, and in Connaught one to 74.

#### DEATHS IN PUBLIC INSTITUTIONS.

Of the 19,523 deaths registered, 4,318, or 22·1 per cent., occurred in public institutions. In Leinster the percentage was 31·8, in Munster 25·0, in Ulster 15·8, and in Connaught 11·0.

#### UNCERTIFIED DEATHS.

According to the returns, 4,633 of the 19,523 deaths which were registered during the quarter were uncertified, being 24 per cent. of the total. In Leinster the percentage was 17, in Munster 26, in Ulster 19, and in Connaught the uncertified deaths were 51 per cent. of the total deaths registered in the province.

#### URBAN DISTRICTS.

Table V. gives separate statistics for the Urban Districts. It will be observed that the birth rate last quarter for these districts, which contain nearly one-third of the total population of the country was 24·0 per 1,000 of the population, the rates for the three preceding quarters being 23·8, 21·6, and 24·7, respectively, and the average rate for the 5 years 1911-15 being 27·9. In the remainder of the country the birth rate was 20·9 per 1,000 as against 19·3, 18·6, and 20·0, respectively, in the three preceding quarters and an average rate for the corresponding quarter of the previous five years of 22·2.

The annual rate represented by the deaths from all causes for the Urban Districts during the quarter just ended was 18·7 per 1,000 as compared with 14·9, 18·3, and 20·4, respectively, for the last three quarters and an average of 18·7 for the second quarter of the five years 1911-1915. In the remainder of the country the death rate for the quarter was 17·4, the respective rates for the 3 preceding quarters being 12·6, 14·8 and 18·0 per 1,000, the average rate for the 5 years 1911-1915 being 16·9.

For the principal epidemic diseases in the several Urban Districts the annual rate represented by the deaths from them during the quarter under review was 1·1. In the remainder of the country it was 0·5.

## URBAN DISTRICTS.

TABLE V.—BIRTHS and DEATHS registered during the SECOND QUARTER of the year 1916, in the DUBLIN REGISTRATION AREA, and in each of the PROVINCIAL URBAN DISTRICTS in IRELAND (exclusive of Deaths in Public Institutions of Persons admitted from other localities), with the number of deaths from each of the PRINCIPAL EPIDEMIC DISEASES †, from TUBERCULOUS DISEASE, and from CANCER, with the number of Uncertified Deaths.

NOTE.—“The Dublin Registration Area,” consists of the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown. The details for it and for each of the eighteen Urban Districts marked thus (\*) in the following Table have been compiled from the Weekly Returns furnished by the Registrars, and relate to the thirteen weeks ending Saturday, 1st July, 1916.

(a) Constituted an Urban District as from 1st April, 1916.

(c) Including 2 deaths from enteric fever, 14 from scarlet fever, 3 from diphtheria, 6 from cerebro-spinal meningitis for Ballymena, and one for Lurgan. infectious diseases at Purdyshurn, in the Registrar's District of Ballylesson, and Union of Lisburn, and the death of one person from cerebro-spinal meningitis registered in Belfast.

† Enteric fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery, and diarrhoeal diseases.

† See note (†) on page 69.

## VACCINATION.

According to the Returns of Primary Vaccinations received for the second quarter of the year 1916, there were 23,964 persons successfully vaccinated.

## EMIGRATION.

The Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, show that the number of emigrants who left Ireland during the quarter ended 30th June last was 1,900 (344 males and 1556 females), being 1,072 less than in the corresponding quarter of the year 1915, and 11,002 below the average number for the second quarter of the ten years 1906–1915.

TABLE VI.—EMIGRATION from IRELAND during the months of April, May, and June, in 1915 and 1916 :—

MONTHS.	NUMBER OF EMIGRANTS.											
	Males.				Females.				Total.			
	1915.	1916.	In-crease.	De-crease.	1915.	1916.	In-crease.	De-crease.	1915.	1916.	In-crease.	De-crease.
April, ..	440	125	.	315	384	357	.	27	824	482	.	342
May, ..	620	79	.	541	405	412	7	.	1,025	491	.	534
June, ...	770	140	.	630	353	787	434	.	1,123	927	.	196
TOTAL, ..	1,830	344	.	1,486	1,142	1,556	414	.	2,972	1,900*	.	1,072

\* Including 1,208 emigrants to the United States of America, and 692 to Great Britain and the Colonies. Of the former 198 left in the month of April, 322 in May, and 688 in June. Of 1,184 steerage passengers to the United States, 131 had their passages paid for in America.

## PRICES AND PAUPERISM.

The average price of Messrs. Boland's (Limited) 4-lb. loaf for last quarter was 9d., which was also the average price of Messrs. Johnston, Mooney, and O'Brien's (Limited), bread, delivered. In the second quarter of the year 1915 the average price for both firms was 7½d., and in the corresponding quarter of 1906 it was 5½d.

The average price of oatmeal (1st quality) in Dublin for the quarter was 21s. 3d. per cwt. For the second quarter of the year 1915 the average price was 21s., and for the second quarter of 1906 the average price was 14s. 6d. per cwt.

The average price per cwt. of potatoes at the Dublin Potato Market for the quarter was 5s. 9½d. In the second quarter of 1915 the average price was 4s. 5½d. and the price for the corresponding quarter of 1906 was 2s. 9d.

The average price per cwt. of beef at the Dublin Cattle Market was 108s. 6d., as against 91s. 6d. for the second quarter of 1915, the price for the second quarter of 1906 being 56s. 9d.

The price (including cartage) of Whitehaven coal in the City of Dublin ranged from 35s. to 40s. per ton nett.

The highest price of Consols at the Dublin Stock Exchange for the quarter was £61½, and the lowest £56¾.

The minimum annual rate of discount charged on Irish bills at the Bank of Ireland during the quarter was 5 per cent.

NOTE.—The prices of Consols at the Dublin Stock Exchange have been kindly furnished by the Secretary.

TABLE VII.—Showing the AVERAGE PRICES in DUBLIN of BREAD, OATMEAL, POTATOES, and BEEF, during the quarter (13 weeks) ended 1st July, 1916, with the average for the second quarter of the previous ten years, and the NUMBER of PERSONS in IRELAND receiving IN-DOOR AND OUT-DOOR RELIEF.

PERIOD.	Average PRICES OF PROVISIONS.					PAUPERISM.	
	BREAD (4lb. Loaf)		OATMEAL (Corn Exchange), per Cwt. 1st quality.	POTATOES (at Potato Market) per Cwt.	BEEF (at the Dublin Cattle Market), per Cwt.	No. OF PERSONS RELIEVED.

(a) Messrs. Boland's, Limited.

(b) Messrs. Johnston, Mooney, and O'Brien's (Limited) 4-lb. loaf delivered; the price in Messrs. Johnston, Mooney and O'Brien's shops, exclusive of delivery, was ½d. per 4-lb. loaf lower.

(c) Including 7,199 persons relieved by means of works devised for the relief of distress.

NOTE.—The average prices of Oatmeal, Potatoes, and Beef given in the above Table have been kindly supplied by the Department of Agriculture and Technical Instruction for Ireland, and the number of persons receiving In-door and Out-door Relief by the Local Government Board.

## METEOROLOGY.

(Prepared in the Meteorological Office under the direction of Sir Napier Shaw,  
F.R.S.)

APRIL.—The general character of the weather was dull and wet, with temperature a little below the normal. The main wind direction varied between south-west and north-west.

Temperature.—Every week except the last was cold for the time of year. In the Northern division the mean temperature for the month was 280°·3A (45°F), and in the South 281°·3A (47°F). Owing to the relative warmth of the latter days of the month the mean departure from the normal temperature was very slight. During the greater part of the month the thermometer seldom exceeded 286°·A (55°F), and often failed to touch 283°·A (50°F), but towards the end of the month it rose quickly, and on the 29th or 30th reach a maximum of 293°·A (68°F) in several southern localities, and 293°·5A (69°F) at Waterford and Killarney. In the North the highest reading was 292°·5A (67°F) at Markree Castle. The first week brought night frosts to nearly all parts of the country. On the 2nd the thermometer fell to 268°·A (23°F) at Phoenix Park, Dublin, 269°·A (25°F) at Clongowes Wood, and 270°·A (27°F) at Mungret College; and on the 6th to 269°·A (25°F) at Lisburn and Clongowes Wood, 270°·A (27°F) at Shankill, and very nearly as low at several other stations.

*Rainfall.*—Rain fell on 22 days in the North and on 21 in the South, the former yielding a total of 94 mm. and the latter 84 mm. In the North the excess over the April normal was as much as 34 mm., and in the South 17 mm. Very heavy falls within 24 hours were not common, but an exception occurred on the 24th, when 31 mm. fell at Armagh, 38 mm. at Valencia, and 46 mm. at Killarney. The number of days with rain varied from 15 at Kingstown, Lisburn, and Belfast, and 16 at Ballincurra to 24 at Killarney and Dunfanaghy, and to 26 at Blacksod Point. The aggregate fall in the month varied from 152 mm. at Markree Castle and 157 mm. at Killarney to 42 mm. at Dublin (City) and to 40 mm. at Kingstown.

*Bright Sunshine.*—Very few days were bright throughout, and many very cloudy or overcast, but the total duration of bright sunshine was not much below the normal. In the North the mean daily duration was 4·5 hr., a deficiency of 0·4 hr., and in the South 5·2 hr., a deficiency of only 0·1 hr. The mean daily yield varied from 5·9 hr. at Malin Head and 5·7 hr. at Seskin, Carrick-on-Suir, to 4·1 hr. at Markree Castle.

MAY.—The month as a whole was cool, rainy, and dull, but some fair warm days were experienced between the 14th and 20th. The main wind current was from some Westerly point, but all districts had days with winds from the north-eastward, and also some with southerly winds.

*Temperature* for the whole month was about 0·7°A (1°·3F) below the normal, but between the 7th and 13th it was about 2°·2A (4°A) below, and between the 14th and 20th 4°·6A (8°·3F) above. During the greater part of the period the thermometer often remained below 285°A (60°F) throughout the day; occasionally much lower. At Birr Castle and Malin Head on the 6th the highest temperature was only 277°·5A (40°F). On the 19th and 20th, on the other hand, the thermometer rose to a high figure for the time of year. Readings above 294°A (70°F) were common, the highest being 298°A (77°F) at Newtownforbes and Killarney. On several occasions early in the month the thermometer descended to 273°A (32°F) at night; at Lisburn on the 9th and 11th it touched 272°A (31°F). In the north the mean temperature for the whole month was 282°·5A (49°F) and in the south 283°·6A (51°F).

*Rainfall* greatly exceeded the normal; in the north it amounted to 121 mm., an excess of 59 mm.; and in the south 98 mm., an excess of 34 mm. Unusually heavy rains were experienced on the 5th and 6th, especially in the east and north-east of the country. On the 5th Kingstown had 61 mm., Newcastle (Co. Wicklow) 57 mm., Shankill 64 mm., and Newtownforbes 44 mm. On the 6th 41 mm. more fell at Newcastle and 28 mm. at Kingstown. Rain was almost continuous at Lisburn on the 5th, 6th, and 7th, and the total reached 69 mm. The number of days with rain ranged from 17 at some south-eastern stations to between 23 and 25 at many places in the north and west. Thunderstorms were generally brief and did not form a feature of the month.

*Bright Sunshine.*—In the north the mean daily duration was 4·9 hours, or 1·1 hr. less than the normal; and in the south 5·8 hours, or 0·7 hr. below the normal. During the first few days of the month and in the relatively fine week from the 14th the sunshine was about 1 hour per day in excess of the normal.

JUNE.—This month was marked by a general prevalence of cold weather, under the influence of winds which almost throughout were drawn from some Northerly directions, mainly between North-West and North-East, and frequently blowing rather briskly, but the only record of gale force was at Malin Head on the 12th. The northern half returned a deficiency of rain, the southern half an excess, but the sunshine records were about normal. In Dublin it was "the coldest June on record within the past 50 years."

*Temperature.*—The only touch of seasonable mildness occurred on the 17th, when the thermometer rose to between 295° and 297°A (72° and 75°F) in various localities. At other times maxima below 294°A (70°F) were the rule, the records in very numerous instances being below 288°A (59°F), many below 286° (55°F), as low as 283°A (50°F) at Malin Head on the 6th and 7th. In some of the coldest nights the shade temperature dropped to 276°A (36°F) and under sinking to

272½°A (31°F) in Phoenix Park on the morning of the 14th. Ground frost occurred at various times, the exposed thermometer touching 269½°A (26°F) at Shankill on the 14th. Towards the end the nights became milder, with the temperature in places remaining as high as 285° to 286°A (53° to 55°F). For the whole month the mean temperature was deficient to the extent of 1·6A (3°F) in the south, and 2°·2A (4°F) in the north.

*Rainfall.*—Considering the numerous disturbances a striking feature of the month was the general absence of heavy rainstorms. Even falls of 20 mm. (about ¾ in.) were all but unknown. apparently 26 mm. (just over an inch) at Waterford on the 22nd being the heaviest. Here and there hail fell on various days. Between the 9th and 21st several localities had ten to twelve rainless days in succession. The final results show that northern Ireland received only 82 per cent. of the normal quantity, while the southern half had 117 per cent.

*Bright Sunshine.*—The dry spell referred to above was accompanied by very sunny weather, but the rest of the month was mostly dull. The daily average duration of insolation was 5·6 hours in the north, and 6·6 hours in the south, both values differing but slightly from the usual results.

### THE QUARTER.

Owing to the persistent cold of June the mean temperature for the quarter was 1°A (nearly 2°F) below the normal over northern Ireland, and more than ½°A (1°F) below in the south. The rainfall, both frequency and quantity, was much in excess of the average—60 days and 270 mm., or 140 per cent. of the normal in the north, and 59 days and 257 mm., or 132 per cent. in the south. Bright sunshine equalled the normal over the southern half, but showed a loss of half-an-hour per day in the north.

TABLE VIII.—Showing the MEAN WEEKLY VALUES and the difference from their AVERAGE VALUES of the meteorological elements at the Phoenix Park, Dublin,\* for the thirteen weeks ended July 1st, 1916.

Prepared at the Meteorological Office, under the direction of Sir Napier Shaw, F.R.S.

NOTE.—This table has been constructed for the years 1842 to 1846.—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851.—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871.—The English birth and death-rates, as above, were used, deducting the number of emigrants, according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871, as explained for the last period.

1872–1915.—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and emigration, and adjusting the results for the years 1872–81, 1882–91, 1892–1901, and 1902–1911, to allow for the discrepancy between the number thus arrived at for 1881, 1891, 1901, and 1911 respectively, and the population as shown by the Census in each of these years. With reference to the population given for 1915, the movements of the military were taken into account. The population in 1915 has been adopted provisionally for 1916.

[illegible]

\* The Registrars' Districts (331 in number) are Sub-divisions of the Unions or Superintendent Registrars' Districts, and, with a few exceptions, are identical with the Dispensary Districts of the same names former under the Medical Charities Act. The letter *W* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

† The details concerning Births and Deaths in the above table for Districts marked thus (+) on pages 89 and 90 are extracted from the Weekly Returns made by the Registrars, and relate to the 13 weeks extending from 2nd April, 1916, to 1st July, 1916. With the exception of 179 deaths of persons from localities outside the "Dublin Registration Area," the deaths in Public Institutions in these districts have been assigned to the respective districts comprised in the "Dublin Registration Area" from which the deceased were admitted.

† Exclusive of 10 deaths in the Rathdown Union Workhouse of persons admitted from Kingstown, to which Urban District they have been assigned.

ABSTRACT III.—REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES AND SUPERINTENDENT REGISTRARS' DISTRICTS—continued.  
I. PROVINCE OF LEINSTER—continued.

or from the Agencies in the British Colonies and Dependencies,  
the United States of America, and other Foreign Countries, of  
T. FISHER UNWIN, LIMITED, LONDON, W.C.

*Price One Shilling.*

**Marriages :—**APRIL, MAY, JUNE, 1916      **Births and Deaths.—**JULY, AUGUST, SEPTEMBER, 1916.

During the quarter ended 30th September last, there were registered in the 831 Registrars' Districts in Ireland 22,842 births—a number equal to an annual birth-rate of 21·1 in every 1,000 of the estimated population.\* There were 14,605 deaths, during the quarter, representing an annual rate of 13·5 per 1,000.

In the same period (according to the returns obtained by the Royal Irish Constabulary and the Metropolitan Police who acted as enumerators at the several Irish seaports), 2,408 persons emigrated, 1,673 of these going to the United States, and 735 to Great Britain and the Colonies.

In England and Wales last quarter the birth-rate represented was 21·7 in every 1,000 of the estimated population, and the death-rate 11·2 per 1,000.

The birth-rate in Ireland for the quarter is 1·6 below the average rate for the corresponding quarter of the ten years, 1906–1915, but 0·3 above the rate for the third quarter of 1915. The deaths are 32 below those registered in the corresponding quarter of 1915 ; the death-rate is equal to the rate for that quarter, but is 0·7 below the average for the third quarter of the ten years, 1906–1915.

In comparison with those for the corresponding quarter of 1915, the returns of pauperism furnished by the Local Government Board show a decrease of 1,059 in the average number of Workhouse inmates on Saturdays during the quarter, and a decrease of 2,892 in the average number of persons on out-door relief.

\* See page 138.

The annual rate (4·3 per 1,000 of the population) represented by the marriages registered during the second quarter of 1916, is 0·7 below the average rate for the corresponding quarter of the preceding ten years.

TABLE I.—Showing for each PROVINCE and COUNTY in Ireland, the Annual Rate per 1,000 of the population,\* represented by the number of MARRIAGES registered during the Quarter ended 30th June, 1916, and by the BIRTHS and DEATHS registered in the Quarter ended 30th Sept., 1916.

\* Throughout this Report the rates for the total of Ireland are calculated on the estimated population in the middle of 1915; those for the county boroughs of Dublin and Belfast and Londonderry Co. and Co. Borough on the population estimated to the middle of the year 1916; and those for the provinces and remaining counties on the population according to the Census of 1911.

## MARRIAGES.

The Marriages (4,687) registered in Ireland during the second quarter of 1916 are equivalent to an annual rate of 4·3 per 1,000 of the estimated population, being 1·4 below the rate for the corresponding quarter of 1915, and 0·7 below the average rate for the second quarter of the ten years 1906-1915. Of the total number of marriages, 3,186 were registered under the provisions of the 26 and 27 Vic., cap. 90, and 1,501 under the 7 and 8 Vic., cap. 81; the former number being equal to an annual rate of 4·0 per 1,000 of the estimated Roman Catholic population, and the latter affording a rate of 5·3 per 1,000 of the members of all other religious persuasions. The rate under each heading is 0·7 below the average rate for the corresponding quarter of the previous ten years.

It is to be borne in mind that in many parts of the country the greater portion of the annual number of Roman Catholic marriages is celebrated in the first quarter, while as regards other marriages the number in the first quarter is generally less than that for any of the other quarters of the year.

TABLE II.—Showing by QUARTERLY PERIODS the MARRIAGES registered in Ireland in each of the ten years, 1906–1915, and the average number for that period, also the number registered in the first and second quarters of 1916.

### BIRTHS.

The number of births registered during the quarter ended 30th September last was 22,842—11,780 boys and 11,062 girls—being equal to an annual ratio of 1 in every 47.5 or 21.1 per 1,000 of the estimated population. The average number of births registered during the corresponding quarter of the ten years, 1906–15, was 24,820 equivalent to an annual rate of 22.7 per 1,000 of the estimated mean population of those years.

The respective birth-rates for the four provinces\* last quarter are—Leinster, 21.4 per 1,000 of the population according to the Census of 1911; Munster, 20.2; Ulster, 20.9; and Connaught, 20.5.

### DEATHS.

The number of deaths registered in Ireland during the quarter ended 30th September last was 14,605—7,360 males and 7,245 females—affording an annual ratio of 1 in every 74.2 or 13.5 per 1,000 of the estimated population; the average rate for the corresponding quarter of the ten years, 1906–15, was 14.2 per 1,000.

The death-rate in Leinster was 14.6 per 1,000 of the population according to the Census of 1911; in Munster, 12.5; in Ulster, 13.5; and in Connaught, 11.9.

\* See note (\*) on page 126.

TABLE III.—Showing by QUARTERLY PERIODS the number of BIRTHS and DEATHS registered in Ireland in each of the ten years 1906–1915, and the average number for that period ; also the number registered during the first, second, and third quarters of the year 1916 :—

AGES.—Of the 14,605 deaths registered last quarter, 1,725, or 11·8 per cent., were of infants under one year of age ; and 5,632, or 38·6 per cent., were of persons aged 65 years and upwards. The deaths of infants under one year old are equal to 75·5 per 1,000 of the births registered. In the Province of Leinster the number of deaths of infants under one year old equalled 14·7 per cent. of the total deaths registered therein ; in Munster, 11·0 per cent. ; in Ulster, 11·3 per cent. ; and in Connaught, 8·1 per cent. The deaths of persons 65 years old and upwards registered during the quarter in Leinster are equal to 33·9 per cent. ; in Munster to 39·8 per cent. ; in Ulster, to 38·1 per cent. ; and in Connaught, to 48·6 per cent. of the total deaths registered in the province.

CAUSES OF DEATH.

As may be seen from the following Table the total number of deaths from the principal epidemic diseases is 937, and is equivalent to an annual rate of 0·86 per 1,000 living, being 366 (or 0·33 per 1,000) under the average for the third quarter of the five years preceding.

TABLE IV.—Showing the number of deaths from the principal epidemic diseases returned by the Registrars as having been registered during the quarter ended 30th September, 1916, and in each of the eight quarters immediately preceding ; with the averages for the third quarter of the five years, 1911–1915, and the corresponding annual rates per 1,000 of the population, represented by the deaths from these causes, during the periods above referred to.

ENTERIC FEVER.—Deaths from enteric fever which in the three preceding quarters numbered 73, 58 and 55, respectively, were 65 in the quarter just ended, as against 60 in the third quarter of the quinquennium, 1911-15.

Deaths from enteric fever were registered in the following unions:—Lisburn, 7 (including 6 admitted to Purdysburn hospital from Belfast city); Dublin North, 6; Dublin South, 5; Sligo, 4; and 2 deaths each in Balrothery, Birr, Dundalk, Kilkeel, Magherafelt, Mullingar, Omagh, Oughterard, Rathdown, Strabane and Swineford unions.

TYPHUS.—There were 7 deaths from this disease during the quarter, being the same as the average for the corresponding quarter of the preceding five years. In the fourth quarter of 1915, 6 deaths from typhus were registered, and in the first and second quarters of 1916, the deaths from this disease numbered 7 and 12, respectively. In Lisburn union 3 deaths were registered (all belonging to Belfast city), and in Belfast, Cork, Lurgan and Wexford, one death each.

SMALL-POX.—No case of small-pox was reported during the quarter.

MEASLES.—A very low mortality from measles characterized the quarter just ended, amounting to 51 deaths only, as against an average of 124 for the third quarter of the preceding five years. Nineteen of the 51 deaths occurred in Belfast union, 7 in Dublin North, 4 in Dublin South, 5 in Waterford, 4 in Newtownards, and 3 in Carlow.

SCARLET FEVER.—Deaths from scarlet fever, which in the three preceding quarters numbered 138, 79 and 80, respectively, fell to 60 last quarter, which number is 12 under the average for the third quarter of the preceding five years.

Of the total deaths from this cause 10 occurred in Dublin South union, 2 in Dublin North, 10 in Lisburn union (9 of the latter belonging to the city of Belfast), and 3 in Skibbereen.

WHOOPIING-COUGH.—The number of deaths from whooping-cough during the quarter was 174, equivalent to an annual rate of 0·16 per 1,000 of the population. This number is 13 above the average (161) for the corresponding quarter of the five years 1911-15, 7 above the number for the fourth quarter of 1915, 67 under the number for the first quarter of the present year, and 99 under that for the second quarter.

There were 15 deaths in the union of Belfast, 13 in Waterford, 12 in Donegal, 9 in Omagh, 6 in Armagh, 6 in Dublin North, 5 in Dublin South, 6 in Limerick, 5 in Cork, and 4 deaths each in Ardee, Clones, Granard, Lisnaskea, Londonderry and Rathdrum unions.

DIPHTHERIA.—Sixty deaths were attributed to this disease, as against 103, 89 and 57 in the three preceding quarters, and an average of 63 for the third quarter of the five years, 1911-15.

Three deaths from diphtheria were registered in the unions of Dublin North, Dublin South, Enniscorthy, Lisburn (the 3 deaths appertaining to Belfast city), and Waterford, and 2 deaths each in Castleblayney, Letterkenny, Limerick, Middleton, Monaghan, Omagh and Tralee.

DIARRHOEAL DISEASES.—To these causes 517 deaths (representing an annual rate of 0·48 per 1,000 of the population) were ascribed, and of these 455 were deaths from diarrhoea and enteritis of children under 2 years of age, the average number of deaths from diarrhoeal diseases during the third quarter of the five years 1911-15 being 810.

TUBERCULOSIS.—As returned by the Registrars, the number of deaths from tuberculosis disease registered during the quarter was 2,098 (affording an annual rate of 1·93 per 1,000 of the population) as compared with 2,039, 2,456 and 2,767 in the three preceding quarters, the corresponding annual rates represented thereby, being 1·86, 2·24 and 2·55, respectively, per 1,000 of the population.

CANCER.—The deaths of 864 persons were returned as from cancer, being equivalent to an annual rate of 0·80 per 1,000 of the population. In the three quarters ending with 30th June last such deaths numbered 907, 944, and 837, respectively.

#### INQUESTS.

There were 327 inquests reported to the Registrars during the quarter; this number being equal to one in every 45 of the total deaths registered.

In Leinster there was one inquest to every 43 deaths registered, in Munster one to 51, in Ulster one to 35, and in Connaught one to 121.

#### DEATHS IN PUBLIC INSTITUTIONS.

Of the 14,605 deaths registered, 3,244, or 22·2 per cent., occurred in public institutions. In Leinster the percentage was 31·0, in Munster 26·0, in Ulster 15·3, and in Connaught 15·2.

#### UNCERTIFIED DEATHS.

According to the returns 3,200 of the 14,605 deaths registered during the quarter were uncertified, being 22 per cent. of the total. In Leinster the percentage was 16, in Munster 24, in Ulster 17, and in Connaught the uncertified deaths were 46 per cent. of the total deaths registered in the province.

#### URBAN DISTRICTS.

Table V. gives separate statistics for the Urban Districts. It will be observed that the birth rate last quarter for these districts, which contain nearly one-third of the total population of the country was 23·2 per 1,000 of the population, the rates for the three preceding quarters being 21·6, 24·7, and 24·0, respectively, and the average rate for the 5 years 1911-15 being 25·9. In the remainder of the country the birth rate was 19·7 per 1,000 as against 18·6, 20·0, and 20·9, respectively, in the three preceding quarters and an average rate for the corresponding quarter of the previous five years of 20·4.

The annual rate represented by the deaths from all causes for the Urban Districts during the quarter just ended was 14·2 per 1,000 as compared with 18·3, 20·4, and 18·7, respectively, for the last three quarters and an average of 16·3 for the third quarter of the five years 1911-1915. In the remainder of the country the death-rate for the quarter was 12·9, the respective rates for the 3 preceding quarters being 14·8, 18·0, and 17·4 per 1,000, the average rate for the 5 years 1911-1915 being 13·0.

For the principal epidemic diseases in the several Urban Districts the annual rate represented by the deaths from them during the quarter under review was 1·6. In the remainder of the country it was 0·5.

URBAN DISTRICTS.

TABLE V.—BIRTHS and DEATHS registered during the THIRD QUARTER of the year 1916, in the DUBLIN REGISTRATION AREA, and in each of the PROVINCIAL URBAN DISTRICTS in IRELAND (exclusive of Deaths in Public Institutions of Persons admitted from other localities), with the number of deaths from each of the PRINCIPAL EPIDEMIC DISEASES †, from TUBERCULOUS DISEASE, and from CANCER, with the number of Uncertified Deaths.

NOTE.—The Dublin Registration Area\* consists of the City of Dublin and the Urban Districts of Rathmines and Rathgar, Penbroke, Blackrock, and Kingstown. The details for it and for each of the eighteen Urban Districts marked thus (\*) in the following Table have been compiled from the Weekly Returns furnished by the Registrars, and relate to the thirteen weeks ending Saturday, 30th September, 1916.

(a) Constituted an Urban District as from 1st April, 1916, including 6 deaths from enteric fever, 3 from typhus, 9 from scarlet fever, 3 from diphtheria, and 2 from tuberculous disease, admitted from the City of Belfast to the hospital for infectious diseases at Purtyburn, in the Registrar's District of Ballylesson, and Union of Lisburn.

## VACCINATION.

According to the Returns of Primary Vaccinations received for the third quarter of the year 1916, there were 22,018 persons successfully vaccinated.

## EMIGRATION.

The Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, show that the number of emigrants who left Ireland during the quarter ended 30th September last was 2,408 (422 males and 1,986 females), being 1,103 less than in the corresponding quarter of the year 1915, and 4,635 below the average number for the third quarter of the ten years 1906–1915.

TABLE VI.—EMIGRATION from IRELAND during the months of July, August, and September, in 1915 and 1916 :—

MONTHS.	NUMBER OF EMIGRANTS.											
	Males.				Females.				Total.			
	1915.	1916.	In-crease.	De-crease.	1915.	1916.	In-crease.	De-crease.	1915.	1916.	In-crease.	De-crease.
July, ..	654	151	.	503	350	422	72	.	1,004	573	.	431
August, ..	673	126	.	547	481	407	.	54	1,134	533	.	601
September, ..	742	145	.	597	631	1,157	526	.	1,373	1,302	.	71
TOTAL, ..	2,069	422	.	1,647	1,442	1,986	544	.	3,511	2,408*	.	1,103

\* Including 1,673 emigrants to the United States of America, and 728 to Great Britain and the Colonies. Of the former 288 left in the month of July, 328 in August, and 1,057 in September. Of 1,659 steerage passengers to the United States, 185 had their passages paid for in America.

## PRICES AND PAUPERISM.

The average price of Messrs. Boland's (Limited) 4-lb. loaf for last quarter from 3rd July to 9th September was  $8\frac{1}{2}d.$ , from 11th to 16th September,  $9d.$ , and from 18th to 30th September it was  $9\frac{1}{2}d.$ ; and the average price of Messrs. Johnston, Mooney, and O'Brien's (Limited), bread, delivered, was  $8\frac{1}{2}d.$  per 4lb. loaf from 3rd July to 11th September, and  $9d.$  from 13th to 30th September. In the third quarter of the year 1915 the average price for both firms was  $8d.$ , and in the corresponding quarter of 1906 it was  $5\frac{1}{2}d.$

The average price of oatmeal (1st quality) in Dublin for the quarter was 21s. 3d. per cwt. For the third quarter of the year 1915 the average price was 21s., and for the third quarter of 1906 the average price was 14s. 6d. per cwt.

The average price per cwt. of potatoes at the Dublin Potato Market for the quarter was 6s.  $3\frac{1}{2}d.$  In the third quarter of 1915 the average price was 4s., and the price for the corresponding quarter of 1906 was 2s.  $6\frac{3}{4}d.$

The average price per cwt. of beef at the Dublin Cattle Market was 99s. 9d., as against 92s. 3d. for the third quarter of 1915, the price for the third quarter of 1906 being 53s.

The price (including cartage) of Whitehaven coal in the City of Dublin ranged from 40s. to 42s. per ton nett.

The highest price of Consols at the Dublin Stock Exchange for the quarter was £61 $\frac{3}{16}$ , and the lowest £58 $\frac{3}{8}$ .

The minimum annual rate of discount charged on Irish 3 months bills at the Bank of Ireland from 1st July to 12th July was 5 per cent., and for 4 months bills for the same period  $5\frac{1}{2}$  per cent., while for all bills from 13th July to 30th September the rate was 6 per cent.

NOTE.—The prices of Consols at the Dublin Stock Exchange have been kindly furnished by the Secretary.

TABLE VII.—Showing the AVERAGE PRICES in DUBLIN of BREAD, OATMEAL, POTATOES, and BEEF, during the quarter (13 weeks) ended 30th September, 1916, with the average for the third quarter of the previous ten years, and the NUMBER of PERSONS in IRELAND receiving IN-DOOR AND OUT-DOOR RELIEF.

PERIOD.	Average PRICES OF PROVISIONS.					PAUPERISM.	
	BREAD (4lb. Loaf)		OATMEAL (Corn Exchange), per Cwt. 1st quality.	POTATOES (at Potato Market) per Cwt.	BEEF (at the Dublin Cattle Market), per Cwt.	No. OF PERSONS RELIEVED.

(a) Messrs. Boland's, Limited.

(b) Messrs. Johnston, Mooney, and O'Brien's (Limited) 4-lb. loaf delivered; the price in Messrs. Johnston, Mooney and O'Brien's shops, exclusive of delivery, was ½d. per 4-lb. loaf lower.

(c) Including 2,645 persons relieved by means of works devised for the relief of distress.

NOTE.—The average prices of Oatmeal, Potatoes, and Beef given in the above Table have been kindly supplied by the Department of Agriculture and Technical Instruction for Ireland, and the number of persons receiving In-door and Out-door Relief by the Local Government Board.

## METEOROLOGY.

[Prepared in the Meteorological Office, under the direction of Sir Napier Shaw, F.R.S.]

**JULY.**—During the first fortnight the weather was rather cold for the time of the year, and more or less rainy, with local thunderstorms, while bright, sunny periods were rarely experienced. With the latter part of the month, however, a decided improvement occurred; temperature rose, a wet day became the exception, and the sky cleared considerably. Thunder storms were, nevertheless, experienced in several places on the 23rd and 24th.

**Temperature.**—For the month as a whole temperature was a little above the normal, except in the extreme north and north-west, the greatest deviation being 1.1a (2°F) at Killarney. Before the 15th no part of the country had a maximum reading as high as 29.4A (70°F), but subsequently many stations recorded 29.7A (75°F) and above, the highest values being on the 21st and 22nd, when the thermometer rose to 29.9.5A (80°F) at Newtownforbes, Birr Castle, Kilkenny, Waterford, Cahir, and Mungret College, and to 1A (1.8°F) higher at Mountmellick and Killarney. The temperature of the nights was low for the season early in the month and again on the 18th. The lowest minimum readings recorded were 27.7A (39°F) at Markree Castle, and values very little higher at Newtownforbes and Mungret College on the latter date.

*Rainfall.*—For the month as a whole the fall was much below the normal. In the northern division the total was 56 mm., a value only 67 per cent. of the normal, and in the south 45 mm., or 54 per cent. Over a large area there was little or no rain after the 16th, and at Ballinacurra none after the 14th. The largest local falls were 31 mm. at Mountmellick and 36 mm. at Lisburn on the 1st; 34 mm. at Broadford on the 23rd; and 41 mm. at Newtownforbes on the 24th. The two last amounts accompanied thunderstorms.

*Bright Sunshine.*—Except in the south-west of the country, the total duration of bright sunshine was less than the normal. At Birr Castle the mean daily deficiency was 0·5 hr., Phoenix Park 0·8 hr., and at Armagh 1·3 hr. At Valencia on the contrary, there was a mean daily excess of 1 hr. The mean daily duration ranged from 3·5 hr. at Armagh, 4·1 hr. at Birr Castle, and about 4·4 hr. at Malin Head and Markree Castle to 5·4 hr. at Seskin, 6·1 hr. at Valencia, and 6·6 hr. at Ballinacurra.

AUGUST.—The first fortnight was warm, dry, and bright. The subsequent weather, however, was mostly cloudy or dull, with rain on many days, while temperature was much less high, although it remained above the August normal. The mean wind movement was from the south, south-west, or west, but on many occasions the direction was from other points, especially from the north-westward.

*Temperature.*—In the northern division the mean temperature was 288·3A (59·5°F), or 1·5A (2·7°F) above the normal; and in the south 289·6A (61·9°F) or 2A (3·6°F) above. Some days during the earlier part of the month were very hot, the thermometer rising to 297A (75°F) in many places, and exceeding 300A (81°F) locally. The highest value was recorded at Killarney; on the 5th the value was 302A (84°F), and on the 6th, 302·5A (85°F). At Donaghadee, the coldest spot, the mean temperature for the month was 287·7A (58·4°F), and at Killarney, the warmest spot, 290·8A (64·1°F). Very few nights had a low temperature, the lowest recorded being 278A (41°F) at Cahir, on the 21st. As a rule the minimum temperature of the night was above 283A (50°F). Rain fell on 17 or 18 days over the country generally, more frequently in the north-west, and less so in the south-east and east. At Ballinacurra there were only 11 days with rain, and at Waterford 12. In the north the total amount was 77 mm., and in the south 89 mm., the former value being 25 mm., and the latter 15 mm. below the normal. At two stations Markree Castle and Killarney, the fall exceeded the normal. The heaviest downpour within 24 hours, 54 mm., occurred at Killarney on the 22nd. Thunderstorms were experienced from time to time during the latter half of the month, but were not of much violence.

*Bright Sunshine* ranged from a mean of 4·5 hr. per day in the north to 5·4 hr. in the south. In both districts the value was above the normal; in the north by  $\frac{1}{4}$  hr., and in the south by  $\frac{1}{2}$  hr. per day. The brightest places were Valencia and Clongowes Wood, with a mean of about  $6\frac{1}{4}$  hr. per day, and the dullest Markree Castle and Malin Head with  $4\frac{1}{2}$  hr. At Phoenix Park the duration was 5 hr. per day, a value  $\frac{1}{4}$  per day less than the normal.

SEPTEMBER.—For the month generally the weather was rather warm and dry, with, however, less sunshine than usual. The main wind current was from between north and west, but late in the month south-east and east winds became general.

*Temperature* exceeded the normal both early and late in the period, while during the intervening period it was nearly normal or slightly below it. In the north the mean value was 286A (55·4°F), and in the south 287A (57·2°F), both figures being 1A (1·8°F) above the normal. The highest point was reached on the 6th, 7th, or 8th, when more light readings above 294A (70°F) were recorded in nearly all parts of the country the highest of all being 298A (77°F) at Killarney. The lowest of the minimum readings occurred on more variable dates. The lowest, 274·6A (35°F), was at Markree Castle on the 10th, but in most other places the coldest nights were between the 15th and 20th. At Valencia there was no reading lower than 283A (50°F).

*Rainfall.*—Rain fell on 15 or 16 days over the country generally, but on only 9 at Armagh, Clongowes Wood, Waterford, and Roche's Point. At Carrigallen there was no rain between the 4th and 15th and between the 18th and 25th, inclusive, and at Clongowes Wood there was a similar dry period between the 19th and

26th. The total fall in the north was 46 mm., 36 mm. less than the normal, and in the south 51 mm., 22 mm. less. Large quantities within 24 hours were not common, the most marked being 31 mm. at Newcastle (Wicklow) on the 2nd, 32 mm. at Mountmellick on the 26th, and 34 mm. at Birr Castle on the 27th. On the latter date Dublin had 23 mm. The wettest station was Blacksod, with a total of 72 mm., and the driest places Belfast, with only 19 mm., Donaghadee, with 20 mm., and Roche's Point, with 22 mm. Locally, in the Dublin district, the total was slightly above the normal.

*Bright Sunshine* was considerably below the normal, the deviation being very considerable during the third week. In the north the mean duration per day was 3 hr., and in the south 3.1 hr. The former value is 0.8 hr. per day below the normal, and the latter 1.3 below. The brightest stations were Malin Head and Mungret College, where the mean daily amount was about 3.7 hr., and the least sunny Dublin (Trinity College), with 2.3 hr.

FOR THE WHOLE QUARTER the general character of the weather was warm, dry, and dull.

*Temperature.*—In the north the mean value was 287.1A (57.4°F), and in the south 288.3 (59.5°F). These figures are about 1A (1.8°F) in excess of the normal.

*Rainfall.*—In the north the aggregate fall was 179 mm., and in the south 185 mm., the former being only 72 per cent. of the normal, and the latter 76 per cent. The total number of days with rain in the respective districts was 49 and 47.

*Bright Sunshine.*—The mean daily number of hours ranged from 3.8 hr. in the North to 4.6 hr. in the South. Both these values were low for the time of year; that in the North was only 88 per cent. of the normal, and that in the South 95 per cent.

TABLE VIII.—Showing the MEAN WEEKLY VALUES and the difference from their AVERAGE VALUES of the meteorological elements at the Phoenix Park, Dublin,\* for the thirteen weeks ended September 30th, 1916.

NOTE.—This table has been constructed for the years 1842 to 1846.—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851.—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871.—The English birth and death-rates, as above, were used, deducting the number of emigrants, according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871, as explained for the last period.

1872–1914.—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and emigration, and adjusting the results for the years 1872–81, 1882–91, 1892–1901, and 1902–1911, to allow for the discrepancy between the number thus arrived at for 1881, 1891, 1901, and 1911 respectively, and the population as shown by the Census in each of these years.

1915–1916.—The estimated population for 1915 has been computed as in 1814, with some additional adjustments with regard to the movements of the military. The population in 1915 has been adopted provisionally for 1916.

Marriages :—JULY, AUGUST, SEPTEMBER, 1916. Births and Deaths.—OCT., NOV., DEC., 1916.

During the quarter ended 31st December last, there were registered in the 831 Registrars' Districts in Ireland 21,016 births—a number equal to an annual birth-rate of 19·4 in every 1,000 of the estimated population.\* There were 16,754 deaths, during the quarter, representing an annual rate of 15·5 per 1,000.

In the same period (according to the returns obtained by the Royal Irish Constabulary and the Metropolitan Police who acted as enumerators at the several Irish seaports), 1,821 persons emigrated, 1,192 of these going to the United States, and 624 to Great Britain and the Colonies.

In England and Wales last quarter the birth-rate represented was 20·1 in every 1,000 of the estimated population, and the death-rate 14·9 per 1,000.

The birth-rate in Ireland for the quarter is 2·2 below the average rate for the corresponding quarter of the ten years, 1906–1915, and 0·4 below the rate for the fourth quarter of 1915. The deaths are 790 below those registered in the corresponding quarter of 1915 ; the death-rate is 0·7 below the rate for that quarter, and 0·5 below the average for the fourth quarter of the ten years, 1906–1915.

In comparison with those for the corresponding quarter of 1915, the returns of pauperism furnished by the Local Government Board show a decrease of 504 in the average number of Workhouse inmates on Saturdays during the quarter, and a decrease of 1,939 in the average number of persons on out-door relief.

\* See page 203.

The annual rate (4·8 per 1,000 of the population) represented by the marriages registered during the third quarter of 1916, is 0·2 below the average rate for the corresponding quarter of the preceding ten years.

TABLE I.—Showing for each PROVINCE and COUNTY in Ireland, the Annual Rate per 1,000 of the population,\* represented by the number of MARRIAGES registered during the Quarter ended 30th Sept., 1916, and by the BIRTHS and DEATHS registered in the Quarter ended 31st Dec., 1916.

\* Throughout this Report the rates for the total of Ireland are calculated on the estimated population in the middle of 1915; those for the county boroughs of Dublin and Belfast and Londonderry Co. and Co. Borough on the population estimated to the middle of the year 1916; and those for the provinces and remaining counties on the population according to the Census of 1911.

## MARRIAGES.

The Marriages (5,243) registered in Ireland during the third quarter of 1916 are equivalent to an annual rate of 4·8 per 1,000 of the estimated population, being 0·7 below the rate for the corresponding quarter of 1915, and 0·2 below the average rate for the third quarter of the ten years 1906-1915. Of the total number of marriages, 3,639 were registered under the provisions of the 26 and 27 Vic., cap. 90, and 1,604 under the 7 and 8 Vic., cap. 81; the former number being equal to an annual rate of 4·5 per 1,000 of the estimated Roman Catholic population, and the latter affording a rate of 5·7 per 1,000 of the members of all other religious persuasions. The rate under the former heading is equal to, but that under the latter heading is 0·8 below the average rate for the corresponding quarter of the previous ten years.

It is to be borne in mind that in many parts of the country the greater portion of the annual number of Roman Catholic marriages is celebrated in the first quarter, while as regards other marriages the number in the first quarter is generally less than that for any of the other quarters of the year.

TABLE II.—Showing by QUARTERLY PERIODS the MARRIAGES registered in Ireland in each of the ten years, 1906–1915, and the average number for that period, also the number registered in the first, second and third quarters of 1916.

### BIRTHS.

The number of births registered during the quarter ended 31st December last was 21,016—10,757 boys and 10,259 girls—being equal to an annual ratio of 1 in every 51.6 or 19.4 per 1,000 of the estimated population. The average number of births registered during the corresponding quarter of the ten years, 1906–15, was 23,672, equivalent to an annual rate of 21.6 per 1,000 of the estimated mean population of those years.

The respective birth-rates for the four provinces\* last quarter are—Leinster, 19.8 per 1,000 of the population according to the Census of 1911; Munster, 18.6; Ulster, 18.9; and Connaught, 19.4.

### DEATHS.

The number of deaths registered in Ireland during the quarter ended 31st December last was 16,754—8,469 males and 8,285 females—affording an annual ratio of 1 in every 64.7 or 15.5 per 1,000 of the estimated population; the average rate for the corresponding quarter of the ten years, 1906–15, was 16.0 per 1,000.

The death-rate in Leinster was 17.4 per 1,000 of the population according to the Census of 1911; in Munster, 14.1; in Ulster, 15.6; and in Connaught, 12.3.

\* See note (\*) on page 188

TABLE III.—Showing by QUARTERLY PERIODS the number of BIRTHS and DEATHS registered in Ireland in each of the ten years 1906–1915, and the average number for that period; also the number registered during each quarter of the year 1916 :—

AGES.—Of the 16,754 deaths registered last quarter, 1,774, or 10·6 per cent., were of infants under one year of age; and 7,252, or 43·3 per cent., were of persons aged 65 years and upwards. The deaths of infants under one year old are equal to 84·4 per 1,000 of the births registered. In the Province of Leinster the number of deaths of infants under one year old equalled 13·6 per cent. of the total deaths registered therein; in Munster, 10·4 per cent.; in Ulster, 9·4 per cent.; and in Connaught, 7·1 per cent. The deaths of persons 65 years old and upwards registered during the quarter in Leinster are equal to 38·2 per cent.; in Munster to 45·3 per cent.; in Ulster, to 43·2 per cent.; and in Connaught, to 53·4 per cent. of the total deaths registered in the province.

CAUSES OF DEATH.

As may be seen from the following Table the total number of deaths from the principal epidemic diseases is 710, and is equivalent to an annual rate of 0·66 per 1,000 living, being 352 (or 0·31 per 1,000) under the average for the fourth quarter of the five years preceding.

TABLE IV.—Showing the number of deaths from the principal epidemic diseases returned by the Registrars as having been registered during the quarter ended 31st December, 1916, and in each of the eight quarters immediately preceding; with the averages for the fourth quarter of the five years, 1911–1915, and the corresponding annual rates per 1,000 of the population, represented by the deaths from these causes, during the periods above referred to.

**ENTERIC FEVER.**—During the quarter ended 31st December last, 78 deaths from enteric fever (affording an annual rate of 0·07 per 1,000 of the population) were registered in Ireland, as compared with an average of 76 for the fourth quarter of the preceding 5 years, the deaths in the first three quarters of 1916 numbering 58, 55, and 65, respectively.

Of the 78 deaths, 12 were registered in Dublin North union, 8 in Dublin South, 8 in Lisburn (all of the latter belonging to Belfast county borough), 4 each in Cork, Letterkenny, Limerick, and Sligo, 3 each in Cavan and Newry, and 2 each in Ballyshannon, Enniskillen, Londonderry and Monaghan.

**TYPHUS.**—Five deaths from typhus were recorded, one death occurring in each of the following unions :—Cahersiveen, Dublin South, Galway, Lisburn and Tuam. In the first quarter of the year deaths from this cause numbered 7, in the second 12, and in the third 7, the average for the fourth quarter of the five years 1911-15 being 8.

**SMALL POX.**—No case of this disease has been reported.

**MEASLES.**—Deaths from measles, which numbered 202, in the first quarter of the year, fell to 135 in the second, and to 51 in the third, further fell to 37 in the quarter just ended, which number is no less than 143 below the average (180) for the fourth quarter of the five years, 1911-15.

Sixteen of the 37 deaths occurred in Dublin North union, 10 in Belfast, and 9 in Waterford.

**SCARLET FEVER.**—As in the case of measles, scarlet fever shows a considerable decline in comparison with the fourth quarter of the five preceding years, the deaths during the quarter numbering 42, as against an average of 125. In the first three quarters of 1916, they amounted to 79, 80, and 60, respectively.

Twenty-four of the 42 deaths occurred in the following unions :—Lisburn, 7 (5 appertaining to Belfast county borough); Dublin South, 4; Dublin North, 3; Birr, 3; Mallow, 3; Cookstown, 2; and Shillelagh, 2.

**WHOOPIING-COUGH.**—To this cause 133 deaths were attributed, a mortality equivalent to an annual rate of 0·12 per 1,000 of the population. These deaths are much below the numbers recorded during the first three quarters of 1916, namely, 241, 273, and 174, respectively, and 7 under the average (140) for the fourth quarter of the five years, 1911-1915.

In the union of Belfast, 9 deaths were registered; in Armagh, 7; in Dublin South, 7; in Killarney, 6; in Rathdown, 6; in Glenties, 5; in Longford, 5; and in Carrick-on-Suir, Listowel, and Omagh, 4 deaths each.

**DIPHTHERIA.**—Though 26 under the average (94) for the corresponding quarter of the preceding five years, deaths from diphtheria (numbering 68) during the quarter just ended are 8 above those for the third quarter, and 11 above those for the second quarter of 1916. They are, however, 21 under those recorded for the first quarter of 1916, and 35 under those registered during the fourth quarter of 1915. Nine of the 68 deaths were registered in Lisburn union (6 appertaining to Belfast county borough), 6 in Dublin North, 4 in Dublin South, and 3 each in Cork and Wexford unions.

**DIARRHOEAL DISEASES.**—Of 347 deaths from diarrhoeal diseases, 286 were those of children under 2 years of age from diarrhoea and enteritis. The 347 represent an annual rate of 0·32 per 1,000 of the population, and are 92 under the average for the fourth quarter of the five years, 1911-1915.

**TUBERCULOSIS.**—There were 1,805 deaths, being equal to an annual rate of 1·66 per 1,000, from this cause registered during the quarter, according to returns furnished by the Registrars, as against 2,456, 2,767, and 2,098, respectively, in the three preceding quarters, the corresponding annual rates represented by these deaths being 2·24, 2·55, and 1·93 per 1,000 of the population.

**CANCER.**—This disease caused 902 deaths, affording an annual rate of 0·83 per 1,000 of the population. In the first quarter of the year, 944 deaths were recorded, in the second, 837, and in the third quarter, 864 deaths.

**POLIOMYELITIS.**—With reference to the quarter just ended, the Registrars of the undermentioned districts have furnished reports regarding this disease :—

Bailieborough; *Bailieborough*.—"An epidemic of poliomyelitis occurred in district which resulted in 4 deaths having taken place."

Ballymena; *Toome*.—"During quarter reported one case of acute anterior poliomyelitis."

Castlereagh; *Ballinlough*.—"Had 17 or 18 cases of poliomyelitis with one death during early part of quarter."

Claremorris; *Ballyhaunis*.—"There were 5 cases of poliomyelitis, one of which proved fatal. No fresh cases for over six weeks."

Ballinasloe; *Laurencetown*.—"The death of a boy from acute poliomyelitis was registered."

Baltinglass; *Baltinglass, No. 1*.—"One fatal case of acute infective poliomyelitis registered during the quarter."

#### INQUESTS.

There were 442 inquests reported to the Registrars during the quarter; this number being equal to one in every 38 of the total deaths registered.

In Leinster there was one inquest to every 36 deaths registered, in Munster one to 50, in Ulster one to 29, and in Connaught one to 118.

#### DEATHS IN PUBLIC INSTITUTIONS.

Of the 16,754 deaths registered, 3,496, or 20·9 per cent., occurred in public institutions. In Leinster the percentage was 27·7, in Munster 24·7, in Ulster 15·5, and in Connaught 12·8.

#### UNCERTIFIED DEATHS.

According to the returns, 3,910 of the 16,754 deaths registered during the quarter were uncertified, being 23 per cent. of the total. In Leinster the percentage was 18, in Munster 25, in Ulster 19, and in Connaught the uncertified deaths were 49 per cent. of the total deaths registered in the province.

#### URBAN DISTRICTS.

##### THE QUARTER.

Table V. gives separate statistics for the Urban Districts. It will be observed that the birth rate last quarter for these districts, which contain nearly one-third of the total population of the country, was 20·6 per 1,000 of the population, the rates for the three preceding quarters being 24·7, 24·0, and 23·2, respectively, and the average rate for the 5 years 1911-15 being 24·1. In the remainder of the country the birth rate was 18·5 per 1,000, as against 20·0, 20·9, and 19·7, respectively, in the three preceding quarters, and an average rate for the corresponding quarter of the previous five years of 19·7.

The annual rate represented by the deaths from all causes for the Urban Districts during the quarter just ended was 17·1 per 1,000, as compared with 20·4, 18·7, and 14·2, respectively, for the last three quarters and an average of 18·1 for the fourth quarter of the five years 1911-1915. In the remainder of the country the death-rate for the quarter was 14·4, the respective rates for the three preceding quarters being 18·0, 17·4, and 12·9 per 1,000, the average rate for the five years 1911-1915 being 14·5.

For the principal epidemic diseases\* in the several Urban Districts the annual rate represented by the deaths from them during the quarter under review was 1·1. In the remainder of the country it was 0·4.

##### THE YEAR 1916.

It will be seen from Table VI. that the rate represented by the number of births registered in the Urban Districts of Ireland during the year 1916 was 23·1 per 1,000 of the population, as compared with 26·6, 26·7, and 25·0, respectively, in the three preceding years.

For the Rural Districts the birth rate in 1916 was 19·7, the birth rates for the three years, 1913-15, being 21·0, 20·5, and 20·3.

In the Urban Districts the death rate from all causes was 17·6 per 1,000, as against 19·0, 19·2, and 19·3 in the three years preceding. In the remainder of the country the death rate from all causes was 15·7 per 1,000, as compared with 16·1, 15·0 and 16·4 in the three years 1913-15.

For the principal epidemic diseases\* in 1916, the rate in the Urban Districts per 1,000 of the population was 1·4, and in the Rural Districts it was 0·5 per 1,000.

The Infant mortality rate for the Urban Districts, based on the Births and Deaths of Infants under one year of age registered during the year 1916, as returned by the Registrars, was 116 per 1,000 Births, the rate for the Rural Districts being only 64 per 1,000.

\* See note (†) on page 193.

# URBAN DISTRICTS.

TABLE V.—BIRTHS and DEATHS registered during the FOURTH QUARTER of the year 1916, in the DUBLIN REGISTRATION AREA, and in each of the PROVINCIAL URBAN DISTRICTS in IRELAND (exclusive of Deaths in Public Institutions of Persons admitted from other localities), with the number of deaths from each of the PRINCIPAL EPIDEMIC DISEASES †, from TUBERCULOUS DISEASE, and from CANCER, with the number of Uncertified Deaths.

NOTE.—The Dublin Registration Area,\* consists of the City of Dublin and the Urban Districts of Rathmines and Rathgar, Pembroke, Blackrock, and Kingstown. The details for it and for each of the eighteen Urban Districts marked thus (\*) in the following Table have been compiled from the Weekly Returns furnished by the Registrars, and relate to the thirteen weeks ending Saturday, 30th December, 1916.

† See note (†) on page 196.  
(a) Constituted an Urban District as from 1st April, 1916. The annual rates given are based on the figures for the last three quarters of the year.  
(b) Including 17 deaths from enteric fever, 3 from typhus, one from measles, 43 from scarlet fever, 21 from diphtheria, one from diarrhoea, 13 from tuberculous disease, and 7 from cerebro-spinal fever admitted from the City of Belfast to institutions in the Registrar's District of Ballylesson, and Union of Lisburn, and the deaths of 4 persons from cerebro-spinal fever or cerebro-spinal meningitis registered in Belfast.  
(c) Including one death from cerebro-spinal meningitis in Ballymena, Londonderry, and Lurgan, and one from cerebro-spinal fever in Newry.

## VACCINATION.

According to the Returns of Primary Vaccinations received for the fourth quarter of the year 1916, there were 15,854 persons successfully vaccinated. The total number for the year was 74,722.

## EMIGRATION.

The Returns obtained by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, show that the number of emigrants who left Ireland during the quarter ended 31st December last was 1,821 (336 males and 1,485 females), being 1,266 less than in the corresponding quarter of the year 1915, and 2,792 below the average number for the fourth quarter of the ten years 1906–1915.

TABLE VII.—EMIGRATION from IRELAND during the months of October, November, and December, in 1915 and 1916 :—

MONTHS.	NUMBER OF EMIGRANTS.											
	Males.				Females.				Total.			
	1915.	1916.	In-crease.	De-crease.	1915.	1916.	In-crease.	De-crease.	1915.	1916.	In-crease.	De-crease.
October, ..	1,003	176	.	827	701	946	245	.	1,704	1,122	.	582

TOTAL, ..	1,908	336	.	1,572	1,179	1,485	306	.	3,087	1,821*	.	1,266

\* Including 1,192 emigrants to the United States of America, and 624 to Great Britain and the Colonies. Of the former 833 left in the month of October, 271 in November, and 88 in December. Of 1,186 steerage passengers to the United States, 179 had their passages paid for in America.

## PRICES AND PAUPERISM.

The average price of Messrs. Boland's (Limited) 4-lb. loaf for last quarter from 2nd October to 28th October was  $9\frac{1}{2}d.$ , from 30th October to 2nd December,  $10d.$ , and from 4th to 30th December, it was  $10\frac{1}{2}d.$ ; and the average price of Messrs. Johnston, Mooney, and O'Brien's (Limited), bread, delivered, was  $9\frac{1}{2}d.$  per 4lb. loaf from 2nd October to 28th October, and  $10d.$  from 30th October to 30th December. In the fourth quarter of the year 1915 the average price for both firms was  $8d.$ , and in the corresponding quarter of 1906 it was  $5\frac{1}{2}d.$

The average price of oatmeal (1st quality) in Dublin for the quarter was 26s. 3d. per cwt. For the fourth quarter of the year 1915 the average price was 21s., and for the fourth quarter of 1906 the average price was 14s. 6d. per cwt.

The average price per cwt. of potatoes at the Dublin Potato Market for the quarter was 8s. 10d. In the fourth quarter of 1915 the average price was 3s.  $8\frac{1}{2}d.$ , and the price for the corresponding quarter of 1906 was 3s. 3d.

The average price per cwt. of beef at the Dublin Cattle Market was 95s., as against 77s. for the fourth quarter of 1915, the price for the fourth quarter of 1906 being 50s. 9d.

The price (including cartage) of Whitehaven coal in the City of Dublin was 42s. per ton nett.

The highest price of Consols at the Dublin Stock Exchange for the quarter was £59½, and the lowest £53¾.

The minimum annual rate of discount charged on Irish bills at the Bank of Ireland during the quarter was 6 per cent.

The average number of persons in Ireland receiving in-door relief on Saturdays during the fourth quarter of 1916 was 31,098, or 504 below the average for the corresponding period in 1915.

NOTE.—The prices of Consols at the Dublin Stock Exchange have been kindly furnished by the Secretary.

The average weekly number of persons receiving out-door relief during the quarter was 33,968, being 1,939 below the average for the fourth quarter of 1915. Of the persons receiving in-door relief during the fourth quarter of 1916, an average number of 1,633 in each week was located in asylums for the blind and the deaf and dumb, and in extern hospitals; in the corresponding quarter of 1915 the average weekly number was 1,610.

TABLE VIII.—Showing the AVERAGE PRICES in DUBLIN of BREAD, OATMEAL, POTATOES, and BEEF, during the quarter (13 weeks) ended 30th December, 1916, with the average for the fourth quarter of the previous ten years, and the NUMBER of PERSONS in IRELAND receiving IN-DOOR AND OUT-DOOR RELIEF.

Average PRICES OF PROVISIONS.						PAUPERISM.

(a) Messrs. Boland's, Limited.  
(b) Messrs. Johnston, Mooney, and O'Brien's (Limited) 4-lb. loaf delivered; the price in Messrs. Johnston, Mooney and O'Brien's shops, exclusive of delivery, was ½d. per 4-lb. loaf lower.  
NOTE.—The average prices of Oatmeal, Potatoes, and Beef given in the above Table have been kindly supplied by the Department of Agriculture and Technical Instruction for Ireland, and the number of persons receiving In-door and Out-door Relief by the Local Government Board.

METEOROLOGY.

OCTOBER.—A general south-westerly wind, that frequently blew with the force of a gale, ruled the weather during the first fortnight, and brought an unusually high temperature, with much rain and little sunshine. On the night of the 14th the wind became northerly, and temperature fell. During the rest of the month wind was variable, and the weather continued wet and dull, and occasionally stormy.

Temperature.—During the first two weeks the mean temperature was 3° to 4° (5 to 7F) above the normal. Maximum readings above 290° (62·6F) were the rule, and during the first week there were several above 293° (68F), the highest being 294° (70F) in the neighbourhood of Dublin. The temperature of the nights was also very high for the time of year. During the third week there was a marked reduction in warmth, although the thermometer remained somewhat above the normal, but the last week was cold. The mean temperature for the whole month was 1·3° (2·3F) above the normal in the north and 1·9° (3·4F) above it in the south. Slight frost occurred late in the month at a few places in the South, the lowest temperature being 271·5° (29F) at Foynes.

*Rainfall.*—Rain yielding a measurable quantity fell on 28 days over the country generally and on 31 days at Markree Castle, Blacksod, and Foynes. In the eastern districts rain was less frequent; at Waterford rain fell on only 22 days, and at Clongowes Wood and Kingstown on 23 days. In the north the total fall was 166 mm., 68 mm. above the normal; and in the south 201 mm., or 103 mm. above. In some districts the excess was greater locally. At Markree Castle it amounted to 113 mm., Valencia 139 mm., and at Killarney to 218 mm. Many localities had exceptionally heavy falls in one continuous downpour, but the most notable were 36 mm. at Waterford and 46 mm. at Ballinacurra on the 1st, 47 mm. at Blacksod, 51 mm. at Valencia, and 136 mm. at Killarney on the 21st. This last amount is, of course, quite abnormal.

*Bright Sunshine* was much below the normal. In the north the mean per day was 1·5 hour, and in the south 1·8 hour, the respective values being 1·4 hour and 1·5 hour below the normal. Of the stations reporting duration of sunshine, the brightest was Seskin, Carrick-on-Suir, with 2·5 hours per day, and the dullest Markree Castle with 1·3 hour.

NOVEMBER.—During the greater portion of the month the weather was very unsettled. Rain fell on most days, and on several occasions it was accompanied by boisterous winds. As a rule, the wind was from some point between south and west, but a severe gale on the 16th and 17th was mainly from south-east. Temperature was above the normal generally, the mean for the month being  $280^{\circ}$  ( $44\cdot6^{\circ}\text{F}$ ), or  $0\cdot5^{\circ}$  ( $0\cdot9^{\circ}\text{F}$ ) in excess in the north, and  $281^{\circ}$  ( $46\cdot4^{\circ}\text{F}$ ), or  $0\cdot3^{\circ}$  ( $0\cdot5^{\circ}\text{F}$ ) in excess in the south. Some of the days were very warm for the time of year. On the 10th readings of about  $289^{\circ}$  ( $61^{\circ}\text{F}$ ) were recorded at several stations in the south; at Seskin the value was as high as  $291^{\circ}$  ( $64^{\circ}\text{F}$ ). During the earlier part of the month there was scarcely any frost, but on the 19th and some subsequent dates the temperature fell below the freezing point rather frequently, in one or two localities as low as  $269\cdot7^{\circ}$  ( $26^{\circ}\text{F}$ ).

Rain fell on 24 days over the country generally. In the north the total amount was 117 mm., and in the south 170 mm., the former value being 17 mm. more than the normal, and the latter 65 mm. more. Some very heavy rain occurred on the 4th, and on the 16th the rain was particularly heavy in the south-west and south. At Seskin there was 48 mm., Cahir 50 mm., and at Killarney as much as 89 mm. On the following day 40 to 50 mm. fell at Dublin and in its vicinity, 32 mm. at Markree, 39 mm. at Waterford, and 30 mm. at Seskin. These rains caused considerable inundations in the south-west. At Killarney the aggregate fall for the month was just twice the normal, and at Glasnevin more than twice as much. At Broadford, Co. Clare, the total fall in October and November was 368 mm., the largest amount in two consecutive months in 32 years.

*Bright Sunshine* was less than the normal in all parts of the country, the mean deficiency being 0·7 hour per day both in the north and south. In the north the mean daily amount was  $1\frac{1}{4}$  and in the south  $1\frac{1}{2}$  hour.

DECEMBER.—The mean temperature and the total fall of rain were below the normal, while the duration of sunshine was above it. The wind came from all quarters, but was rarely very strong. During the colder part of the month it was mainly northerly, and with the warm weather at the end of the month between south and west.

*Temperature.*—During the three first weeks temperature was almost continuously below the normal, but subsequently it was rather above it. The coldest period was about the middle of the month, when the mean temperature was everywhere below  $275^{\circ}$  ( $35^{\circ}\text{F}$ ), and some very sharp frosts were experienced. At Markree Castle on the 15th the minimum reading was as low as  $267^{\circ}$  ( $21^{\circ}\text{F}$ ), at Cahir on the 16th and 17th it was  $265^{\circ}$  ( $18^{\circ}\text{F}$ ), and at Phoenix Park, Clongowes Wood and Kilkenny nearly as low. At about the same time the warmth of the days was little above  $273^{\circ}$  ( $32^{\circ}\text{F}$ ) over the country generally, and slightly below it in places. On the 17th there was a remarkable glazed frost at Dublin, concerning which Sir John Moore writes:—"Rain fell in Dublin and the neighbouring districts on the early morning of Sunday, the 17th, but it turned into ice on the frozen ground, and the dangerous phenomenon known as 'glazed frost' developed. The whole surface of the Dublin streets was covered with a thick coating of transparent ice, on which it was almost impossible to walk with safety. Some 300 accidents were treated in the Dublin hospitals in the course of that remarkable day, on which the thermometer

did not rise higher than 289° in the city.” The highest maximum temperatures were recorded at the end of the month, when the thermometer rose to 286° (55F) generally. The mean temperature for the month was the same as in the north as in the south, 276·8° (38·F), but the divergence from the normal was more marked in the south, amounting to 2·4° (4·3F).

*Rainfall.*—Although more or less rain fell on 24 days over the country generally, the aggregate quantity was less than the normal. In the north the value was 92 mm., or 5 mm. below, and in the south 89 mm., as much as 26 mm. below. Some of the precipitation was in the form of snow; at Markree Castle on the 8th and 9th snow lay to the depth of 30 cm. No exceptionally heavy falls of rain within a short time occurred, the largest amounts within 24 hours being 34 mm. at Newcastle, Co. Wicklow, on the 12th, and 31 mm. at Foynes on the 28th. While at Waterford rain fell on only 15 days and at Belfast on 17 days, there were 29 days at Blacksod Point, Newtownforbes, and Roche’s Point.

*Bright Sunshine.*—The mean per day was 1·7 hour, both in the northern and southern divisions, showing an excess of 0·5 hour over the normal in the north and of 0·2 hour in the south. The most sunny station was Seskin, with a daily mean of 2·2 hours, followed by Clongowes Wood and Armagh with 1·9 hour; the dullest was Trinity College, Dublin, with 0·7 hour—just one hour per day less than Phoenix Park.

THE QUARTER.

For the whole quarter the temperature was just equal to the normal. The rainfall was above the normal. In the north the total fall, 375 mm., was 128 per cent. of the normal, while in the south the fall was 460 mm., giving a percentage of 144. Bright sunshine was below the normal in both districts. In the north the mean daily duration was 1·5 hour, and in the south 1·7 hour. These values are only 73 and 72 per cent. of the normal.

TABLE IX.—Showing the MEAN WEEKLY VALUES and the difference from their AVERAGE VALUES of the meteorological elements at the Phoenix Park, Dublin,\* for the thirteen weeks ended December 30th, 1916. Prepared at the Meteorological Office, under the direction of Sir Napier Shaw, F.R.S.

NOTE.—This table has been constructed for the years 1842 to 1846.—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851.—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year.

1852 to 1871.—The English birth and death-rates, as above, were used, deducting the number of emigrants, according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over Census numbers for 1861 and 1871, as explained for the last period.

1872–1914.—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and emigration, and adjusting the results for the years 1872–81, 1882–91, 1892–1901, and 1902–1911, to allow for the discrepancy between the number thus arrived at for 1881, 1891, 1901, and 1911 respectively, and the population as shown by the Census in each of these years.

1915–1916.—The estimated population for 1915 has been computed as in 1914, with some additional adjustments with regard to the movements of the military. The population in 1915 has been adopted provisionally for 1916.

**MARRIAGES** Registered during the Quarter ending 30th September, 1916, in PROVINCES, COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS (or POOR LAW UNIONS) of IRELAND; **BIRTHS AND DEATHS** Registered during the Quarter ending 31st December, 1916; Deaths from ENTERIC FEVER, TYPHUS, SMALL-POX, MEASLES, SCARLET FEVER, WHOOPING-COUGH, DIPHTHERIA, DYSENTERY, TUBERCULOUS DISEASE, CANCER, DIARRHŒA and ENTERITIS OF CHILDREN under 2 years, DIARRHŒA of PERSONS aged 2 years and upwards; also VIOLENT DEATHS,\* INQUEST CASES, DEATHS IN PUBLIC INSTITUTIONS, and NUMBER of UNCERTIFIED DEATHS Registered during the Quarter ending 31st December, 1916, in the PROVINCES, COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and REGISTRARS' DISTRICTS of IRELAND; with a Return of **VACINATIONS** for that Quarter.

# ABSTRACT I.—PROVINCES AND COUNTIES.

PROVINCES and COUNTIES.	Area in Statute Acres.	Popula- tion in 1911	Marriages.		Births.		Deaths.		The Deaths registered during the Quarter are stated by the Registrars to include													Number of successful primary Vaccinations in the Quarter ending 31st Dec., 1916						
			Averages in the Quarters ending 30th Sept., in the 10 years, 1906-1915.	Registered in the Quarter ending 30th Sept., 1916.	Averages in the Quarters ending 31st Dec., in the 10 years, 1906-1915.	Registered in the Quarter ending 31st Dec., 1916.	Deaths of		Deaths from								Tuberculous Disease.	Cancer.	Diarrhoea and Enter- itis of Children under- 2 years of age.	Diarrhoea, 2 years of age and upwards.	Violence *		Inquest Cases.	Deaths in Public In- stitutions.	Number of Uncertified Deaths.			
							Infants under 1 year of age.	Persons aged 65 years and upwards.	Enteric Fever	Typhus	Small-pox.	Measles	Scarlet Fever.	Whooping-cough.	Diphtheria.	Dysentery

\* \* \* The Registrars' Districts (831 in number) are Sub-divisions of the Unions or Superintendent Registrars' Districts, and, with a few exceptions, are identical with the Dispensary Districts of the same names and under the Medical Charities Act. The letter *W* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

ed under the Medical Charities Act. The letter *W* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

+ The details concerning Births and Deaths in the above table for Districts marked thus (+) on pages 215 and 216 are extracted from the Weekly Returns made by the Registrars, and relate to the 13 weeks ending from 1st October, 1916, to 30th December, 1916. With the exception of 164 deaths of persons from localities outside the "Dublin Registration Area," the deaths in Public Institutions in these districts have been assigned to the respective districts comprised in the "Dublin Registration Area" from which the deceased were admitted.

districts have been assigned to the respective districts comprised in the "Dublin Registration Area" from which the deceased were admitted.

Exclusive of 6 deaths in the Rathdown Union Workhouse of persons admitted from Blackrock and Kingstown, to which Urban Districts they have been assigned.

† Exclusive of 6 deaths in the  
(a) See note (†) on page 205.
